

Replit Command: Layout Cleanup & De-cluttering

Copy and paste the following command directly into Replit. This focuses strictly on cleaning up the visual hierarchy and ensuring the primary action (Generate) is never hidden.

Command for Replit:

Execute a targeted layout cleanup on the main app interface (`index.html` and associated CSS/JS). The current layout feels cluttered, and the primary Generate button is getting pushed out of view. Fix the following four items exactly as described:

1. Collapse "Tune Your Prompt" by Default

- The `.pmgv3-tuning` accordion (which contains the reasoning dropdown, fact-checking toggle, and audience input) must be **collapsed by default** on both desktop and mobile.
- Users should only see the tuning options if they explicitly click to expand it.

2. Elevate the Generate Button

- The primary Generate button (`#generateBtn` / "Fix My Prompt") must be immediately visible below the main textarea.
- Ensure the flex order or DOM structure places the Generate button *above* the collapsed tuning accordion, or ensure the accordion's collapsed state is small enough that the button is never pushed below the fold on a standard laptop or mobile screen.

3. De-emphasize the Prompt Whisperer

- The Prompt Whisperer section at the top of the left column is competing too heavily with the main "Your Idea" textarea.
- Either collapse it behind a subtle toggle (e.g., "Need help thinking of an idea?") or visually de-emphasize it so the main textarea is the undeniable focal point of the left column.

4. Constrain the "See What's Possible" Cards

- The Before/After cards in the right column are too tall, especially when they stack on mobile.
- Apply a `max-height` to the card text areas with a subtle CSS fade-out (`mask-image: linear-gradient(...)`) or truncation so they do not dominate the vertical space.

Make these changes directly in the code. Do not ask for permission to adjust padding or margins to make it look clean — just execute the cleanup.
