

PromptMeGood UX Polish Report: The First-Time User Experience

This report documents the exact friction points, dead clicks, and confusing layouts a first-time user encounters on the live site today. It is written as a direct handoff for Replit to execute.

1. The Visual Tab Is Broken (Critical)

The Experience: When a user taps the "Visual" tab in the bottom dock, the tab highlights, but the screen does not change. It still shows the Workstation content (Your Goal, Fix My Prompt, etc.). The user has no idea they are in a different mode.

The Fix: The Visual tab must mount the Visual Studio interface. When the Visual tab is active, the Workstation content must be hidden, and the Visual Studio modal/inline-mount must be visible.

2. "Open Visual Studio" Button Does Not Open A Studio

The Experience: In the right column (Photography Suite), there is a button labeled "Open Visual Studio". When clicked, it does not open a modal or a studio. It simply swaps the right column content to a "Master Actionable Plan" view. This is extremely confusing.

The Fix: The "Open Visual Studio" button (`#pmg-vs-launch-rail`) must trigger the full-screen Visual Studio modal overlay. It should not just toggle the right column content.

3. The Three Signature Features Are Buried

The Experience: The three most powerful features on the site — Image Studio, Sora Video, and Storyboard — are located at the very bottom of the page, below the entire Prompt Tuning section. A new user will never see them unless they scroll all the way down.

The Fix: Move the three signature feature buttons (`.pmg-vs-launch-pill`) to the top of the app, directly below the "Your Goal" input box. They need to be immediately visible.

4. "Help Me Start" Is Duplicated

The Experience: The "Help Me Start" button appears twice: once in the top-right nav bar, and again above the "Your Goal" input.

The Fix: Remove the "Help Me Start" button from the top-right nav bar. The one above the input with the "MOST LOVED" badge is the correct placement.

5. "Customize Output" Overwhelms New Users

The Experience: The "Customize Output (Optional)" section is expanded by default, presenting a wall of toggles (Money Mode, Human Voice, Clarity Boost, etc.) before the user has even generated their first prompt.

The Fix: Keep the "Customize Output (Optional)" `<details>` element collapsed by default.

6. Confusing Labels in the Right Column

The Experience: The right column has three different labels for essentially the same thing: "Visual Asset Engine / Photography Suite", "Open Visual Studio", and "Master Link — OFF".

The Fix: Rename "Visual Asset Engine / Photography Suite" to "Image Prompt Builder". Rename "Open Visual Studio" to "Launch Image Studio". Rename "Master Link — OFF" to "Sync With Text Prompt".

7. The Homepage Hero Gap

The Experience: There is a massive empty gap (471px) between the hero text and the feature cards on the homepage.

The Fix: In the homepage CSS, set `main.hero { flex-grow: 0; }`. The current `flex-grow: 1` rule is forcing the hero to stretch and fill the viewport height.

Summary for Replit

The site's core functionality is strong, but the navigation and layout of the visual features are currently broken or confusing. Fixing the Visual tab routing, making the Visual Studio button actually open a modal, and elevating the signature features will dramatically improve the first-time user experience.
