

Guide, Pricing, & Trust Signals Fixes

This brief addresses the discrepancies between the live app UI and the documentation/pricing pages, ensuring a cohesive and trustworthy experience for first-time users.

1. Guide Page Sync

Problem: The `guide.html` page references outdated button names and features that no longer exist in the v3 app, confusing new users.

Fixes:

- **Update Button Names:**
 - Change references from " Generate My Prompt" to "→ Analyze My Idea" (or whatever the primary CTA is currently set to in the app).
 - Ensure the guide accurately reflects the current flow: Type Idea -> Analyze -> Tune -> Generate.
- **Remove Stale Features:**
 - Remove mentions of "Image Workshop" if it's not prominently featured or has been renamed.
 - Remove mentions of "Reverse Engine" if it's no longer a distinct, labeled feature.
 - Remove mentions of " DNA Card" if that export feature is no longer available.
- **Verify Expert Mode Description:** Ensure the description of the Expert Command Center (Diagnose, Engineer, Tune, Variations, Save) matches the actual tabs available in the  Settings drawer.

2. Pricing Page Sync

Problem: The `pricing.html` page in the repository might be out of sync with the live site (e.g., missing the \$79 Founding Member tier).

Fixes:

- **Ensure Founding Member Tier Exists:** Verify that the \$79 one-time Founding Member tier is present in the HTML, matching the live site's offering.
- **Check Waitlist CTAs:** Ensure the "Join Founding Member Waitlist" and "Notify Me" buttons link to the correct forms or modals.

3. Footer & Trust Signals (App Page)

Problem: The main app page (`/app`) lacks a footer, which is a standard trust signal for SaaS products. Users looking for Terms, Privacy, or Contact info have to navigate away to find them.

Fixes:

- **Add a Minimal Footer:** Inject a simple, unobtrusive footer at the very bottom of the `.pmgv3-chassis` or main wrapper on the `/app` page.
- **Include Essential Links:** The footer should include links to:
 - Home (`/`)
 - Guide (`/guide.html`)
 - Pricing (`/pricing.html`)
 - Contact (`mailto:support@promptmegood.com`)
 - Privacy (`/privacy.html`)
 - Terms (`/terms.html`)
- **Styling:** Keep it muted (`color: var(--color-text-muted)`) and small (`font-size: 12px`) so it doesn't distract from the builder, but is there when needed.
