

PromptMeGood Business Mode Implementation Brief

CORE OBJECTIVE

Build **Business Mode** as a marketing workstation for business owners and creators.

CRITICAL: Do NOT add this as a fourth tab to the main navigation. The main tab bar must remain exactly three tabs (Text Prompts, Photography, Video) to prevent mobile crowding. Instead, Business Mode will live as a dedicated icon button in the top-right header (next to Vault and Settings) that opens a slide-up panel or modal.

NON-NEGOTIABLE RULES

- Do NOT build a new backend or new AI routes.
- Do NOT alter the existing `generatePrompt` function.
- The Business Mode form must assemble a string and feed it into the existing goal textarea/generation flow.
- Do NOT touch the existing Money Mode toggle inside the Tune section. Leave it alone.
- Do NOT add a fourth tab to the `pmgv3-tabs` navigation.

UI STRUCTURE: THE HEADER ICON & PANEL

1. Add a new icon button to the `.pmgv3-tb-r` header container, right before the Vault icon:

```
<button class="pmgv3-ico" id="pmgv3-business" type="button" title="Business Mode" aria-label="Business Mode"> </button>
```

2. When clicked, this opens a panel (similar to how Vault or Settings opens) containing the Business Mode workstation.

Inside the Business Mode panel, build an accordion-style form with three sections:

1. Brand Voice (Persistent Settings)

This section should save its values to `localStorage` so the user only has to set it once.

- **Target Audience:** (Text input) e.g., "Busy moms, B2B SaaS founders"
- **Brand Tone:** (Dropdown) Options: Professional, Casual, Luxury, Direct-Response, Educational, Founder-Led, Funny.

2. Social Prompt Packs (The Headline Feature)

A selection of pre-built packs that generate prompts for multiple platforms at once.

- **Select a Pack:** (Dropdown or Radio Buttons)
 - Launch Pack (TikTok, Instagram, LinkedIn, X, Email)
 - Ecommerce Product Pack (TikTok demo, Instagram Reel, Pinterest, Facebook)
 - Founder Content Pack (LinkedIn, X thread, YouTube Short)
 - Local Business Pack (Facebook, Instagram, Google Business)
 - Viral Short-Form Pack (TikTok, Reels, Shorts)
- **Your Offer/Idea:** (Textarea) "What are you promoting or talking about?"

3. Platform Builder (Single Platform Focus)

For when a user wants to focus on one specific platform.

- **Platform:** (Dropdown) TikTok, Instagram, YouTube, LinkedIn, X.
- **Content Type:** (Dropdown) e.g., Hook, Script, Caption, Thread, Ad Copy.
- **Goal:** (Dropdown) Awareness, Engagement, Leads, Sales, Education.
- **Your Offer/Idea:** (Textarea) "What are you promoting or talking about?"

HOW IT WORKS (THE LOGIC)

1. The user opens the Business Mode panel from the header and fills out either the **Social Prompt Packs** section OR the **Platform Builder** section.
2. When they click a "Build Prompt" button inside the panel, JavaScript takes their inputs (including the persistent Brand Voice settings) and assembles them into a single, structured string.
3. Example assembled string: *"I need a [Launch Pack] for my [Offer]. My target audience is [Audience] and my brand tone is [Tone]."*
4. The panel closes automatically.
5. The assembled string is injected into the main `goal` textarea on the Text Prompts tab.
6. The existing `generatePrompt` function is triggered automatically.
7. The result appears in the existing result panel, and the user can use the existing Run With AI, Copy, and Refine buttons.

IMPLEMENTATION STEPS

1. Add the  icon button to the header.
2. Build the HTML structure for the Business Mode panel and its three sections.
3. Write the JavaScript to handle the panel open/close state, save Brand Voice to `localStorage`, assemble the goal string, close the panel, and trigger the existing generation flow.
4. Ensure the UI matches the dark green, premium aesthetic of the rest of the app.
