

PromptMeGood — Mobile UX Fix: The Missing Form & Styling Issues

Prepared by: Manus AI

Date: May 2026

This document addresses the critical mobile UX failure where the entire prompt builder (Step 1) is missing from the Workstation tab, as well as several glaring styling and alignment issues visible in the result panel.

Issue 1: The Missing Form (Step 1 is Gone)

The Problem:

When a user opens the app on mobile and taps the **Workstation** tab, they are presented *only* with the result panel (Step 2). The input form (Step 1) is completely missing from the scrollable view.

Why this happens:

In the `pmg-chassis-v2` redesign, the entire form (`#prompt-form`) was wrapped in a container called `.pmgv2-composer-wrap` . On mobile, a CSS media query forces this container to be `position: fixed` at the bottom of the screen (`bottom: 56px`), turning it into a collapsed "pill" (the "🎨 What do you want to build?" bar).

Because the form is fixed to the bottom, it is removed from the normal document flow. The user sees the result panel taking up the whole screen, with a massive empty space where the generated prompt *will* go, but they have no obvious place to type their goal or access the Prompt Tuning controls.

The Fix:

Disable the fixed bottom positioning for the composer wrap on mobile, returning the form to the normal document flow.

Step 1: Remove the Fixed Positioning CSS

Locate the `pmg-chassis-v2.css` file (or the injected styles in `pmg-fixes-v6.js`) and find the media query that targets `.pmgv2-composer-wrap` on mobile.

Replace the existing rule with this to restore normal flow:

CSS

```
@media (max-width: 900px) {  
  html.pmg-chassis-v2 .pmgv2-composer-wrap {  
    position: relative !important;  
  }  
}
```

```

    bottom: auto !important;
    z-index: 1 !important;
    padding: 16px !important;
    background: transparent !important;
    border: none !important;
  }

  /* Ensure the form displays as a vertical stack */
  html.pmg-chassis-v2 .pmgv2-composer-wrap #prompt-form {
    display: flex !important;
    flex-direction: column !important;
  }
}

```

Step 2: Disable the JS Collapse Logic

If there is JavaScript in `pmg-chassis-v2.js` or `pmg-fixes-v6.js` that toggles a `pmg-composer-collapsed` class on the `<html>` element, disable it. The form should never collapse into a pill.

JavaScript

```

// Ensure the collapsed class is never applied
document.documentElement.classList.remove('pmg-composer-collapsed');

```

Issue 2: The Result Panel Empty Space

The Problem:

The result panel has a massive empty space at the top, pushing the action buttons down. This is caused by `min-height: 420px` on `#resultBox` or `2362px` on `.result-wrap`.

The Fix:

Add this CSS to normalize the result panel height:

CSS

```

@media (max-width: 900px) {
  .result-wrap {
    min-height: auto !important;
    height: auto !important;
  }

  #resultBox {
    min-height: 120px !important; /* Just enough for the placeholder */
  }
}

```

```
}  
}
```

Issue 3: Styling and Alignment Issues

The Problem:

The screenshot reveals several styling and alignment issues in the result panel:

1. **The "What do you want to build?" Pill is Floating and Overlapping:** The collapsed composer pill is floating awkwardly above the bottom dock, overlapping the "Run With AI Here" button and the bottom of the result card.
2. **The "Run With AI Here" Button is Cut Off:** Because the composer pill is floating above the content, the primary action button at the bottom of the result card is partially obscured.
3. **The "Open Expert Command Center →" Link is Floating:** The link is floating in the middle of the screen, between the top action buttons and the "Run This Prompt" card, breaking the visual flow.
4. **The Top Action Buttons are Duplicated:** There is a duplicate set of Copy Prompt and Refine It buttons visible just below the "Your Fixed Prompt" heading, and then again in the 2x2 grid below.

The Fix:

Apply the following CSS to address these styling and alignment issues:

CSS

```
/* In pmg-chassis-v2.css or pmg-fixes-v6.js */  
  
@media (max-width: 900px) {  
  /* 1. Anchor the Composer Pill */  
  html.pmg-chassis-v2 .pmgv2-composer-wrap {  
    position: fixed !important;  
    left: 0 !important;  
    right: 0 !important;  
    bottom: 56px !important; /* Must match the exact height of .pmgv2-dock */  
    padding: 10px 14px !important;  
    z-index: 60 !important;  
    background: var(--bg-color, #0a2420) !important; /* Solid background to pre  
    border-top: 1px solid rgba(62, 224, 160, 0.2) !important;  
  }  
  
  /* 2. Clear the Content */
```

```
html.pmg-chassis-v2 .pmgv2-main,  
html.pmg-chassis-v2 .pmgv2-thread {  
  /* 56px (dock) + ~60px (composer pill) + 24px (breathing room) */  
  padding-bottom: 140px !important;  
}  
  
/* 3. Anchor the Expert Link */  
#expert-mode-link,  
.expert-command-center-link {  
  display: block;  
  text-align: center;  
  margin: 24px auto;  
  padding: 12px;  
  background: rgba(255, 255, 255, 0.03);  
  border-radius: 8px;  
  width: fit-content;  
  font-size: 14px;  
}  
  
/* 4. Remove Duplicate Buttons */  
/* Hide the original inline action row if the grid is present */  
.pmg-result-revealed .original-action-row,  
#result-top-actions {  
  display: none !important;  
}
```
