

PromptMeGood Product Audit Findings

1. Spec Conflicts & UX Friction

The "Define Your Brand" vs "About Your Brand" Conflict

- **Issue:** The Growth Mode drawer has a shared header called "About Your Brand" (brand name, audience, tone, platform). Inside the drawer, there is a goal group called "Define Your Brand" containing the Customer Persona and Creator Profile tools.
- **Friction:** High cognitive load. Users will see "About Your Brand" at the top, fill it out, scroll down, see "Define Your Brand", and wonder if they need to do it again or what the difference is.
- **Resolution:** Rename the goal group from "Define Your Brand" to "**Know Your Audience**".

The "Add What Only You Know" Tab Name

- **Issue:** The new ECC tab name assumes the user already knows they have insider context. A novice user reads "Add What Only You Know", thinks "I don't know anything special", and skips the tab entirely.
- **Friction:** Low engagement with the most powerful tab in the ECC.
- **Resolution:** Rename the tab to "**Make It Yours**". Update the intro copy inside the tab to: *"The AI doesn't know your business, your rules, or your voice. This is where you teach it. Fill in whatever applies — skip what doesn't."*

The "17 Tools" Mismatch

- **Issue:** The spec repeatedly refers to "17 tools" in Growth Mode. The actual count in the codebase is 18 (the 17 listed + Pillar Content Builder).
- **Resolution:** Acknowledge 18 tools. The Pillar Content Builder correctly belongs in the "Create Content" goal group.

Accordion Behavior in Growth Mode

- **Issue:** The spec originally proposed accordion behavior (opening one group closes the others). This was wrong.
- **Why it was wrong:** The entire promise of the Growth Mode restructure is that a user can configure tools across multiple goal groups and generate one unified prompt from all of them. Accordion behavior directly contradicts that.

- **Resolution:** All five goal groups can be open simultaneously. The "Build My Prompt" button scans every field across all groups, collects every non-empty value, and assembles them into one structured output. Empty fields are silently skipped. The button does not need to know which group is "active" — it collects everything with content.

Insider Tab Scope

- **Issue:** The "Make It Yours" (formerly Insider) tab appends rules to `#goal`. `#goal` is the Text panel's textarea. The Photography and Video panels have their own goal fields (`#pimg-vs-image-goal`, `#pimg-vs-video-goal`).
- **Resolution:** Stick to the Text panel only. The ECC is fundamentally a text-prompt engineering tool. Mirroring rules to image/video prompts adds unnecessary complexity and breaks the mental model of those suites.

Insider Tab Reset Button

- **Issue:** The spec says the Reset button "clears all six fields and calls `writeState(_state)`".
- **Friction:** If it only updates state without calling `renderActivePane()`, the UI will still show the old text until the user switches tabs and comes back. State and UI diverge.
- **Resolution:** The Reset button must call `renderActivePane()` after clearing state.

2. Stale Copy & References

index.html

- **Line 685:** *"One-click Run With AI in the app, copy to ChatGPT / Claude / Gemini / Perplexity, or save to your local Vault."* -> Needs to reflect the new ECC and Growth Mode positioning.
- **Line 729:** Photography Suite description mentions "Image Workshop and Reverse Engine power tools free for everyone through July 1, 2026." -> This is accurate but should be checked against the new Camera Look Smart Chip feature.
- **Line 767:** Mentions "Expert Command Center, Growth Mode, Image Workshop, Reverse Engine, DNA Card, Storyboard" as power features. -> Accurate, but "Growth Mode" needs to be clear it's the drawer, not the toggle.

pricing.html

- **Line 347, 377, 413, 447, 480:** *"Expert Command Center — Diagnose • Architect • Tune • Variations • Save"* -> **STALE**. Must be updated to the new tab names: *"Expert*

Command Center — Find Weak Spots • Correct the AI • Make It Yours • Set the Guardrails • Variations • Vault".

- **Line 548-549:** The FAQ "What is the Expert Command Center?" describes the old tabs. -> **STALE**. Must be rewritten to describe the new intent-based tabs and the new "Make It Yours" tab.

guide.html

- **Line 230:** Describes Growth Mode with "Three accordion sections, all optional: Brand Voice..." -> **STALE**. Must be updated to the new 5 goal-group structure and the shared "About Your Brand" header.
- **Line 237-241:** Describes the Expert Command Center with the old tab names. -> **STALE**. Must be updated to the new tab names and include the "Make It Yours" tab.

manual.html

- **Line 141:** " Growth Slides in the Growth Mode drawer (Brand Voice • Social Packs • Platform Builder)." -> **STALE**. Update to reflect the new goal-group structure.
- **Line 275-281:** Section 7.1 "The five tabs" describes the old ECC tabs. -> **STALE**. Must be updated to the new 6 tabs with their new names and descriptions.

app.html

- **Line 4686:** Tour card says "open  Growth Mode for the marketing suite or ♦ Expert Center for advanced controls." -> Accurate, but ensure the tooltip/hover states match the new intent.
- **Line 5745:** Expert warning dialog says "You're about to open advanced prompt-engineering tools — Diagnose, Architect, Tune, Variations, and Save." -> **STALE**. Must be updated to the new tab names.

docs/gotchas.md & docs/scripts.md & replit.md

- Multiple references to the old ECC tab names (Diagnose, Architect, Tune, Variations, Save) and the old Growth Mode structure (Business/Creator lanes, Brand Voice/Social Packs). -> **STALE**. All documentation must be updated to reflect the new architecture.

3. Coherence & Fluidity (The "Business Partner" Check)

- **The Entry Row:** Keeping both the  Growth Mode and ♦ Expert Center buttons is the right call. They serve different intents (What to build vs. How to behave). Merging them would increase cognitive load.

- **The Camera Look Smart Chip:** Option A (swapping the single chip based on keywords) is elegant and frictionless. It avoids cluttering the UI with multiple pills while providing context-aware value.
- **The ECC Redesign:** Moving from feature-based names ("Architect") to intent-based names ("Correct the AI") drastically lowers the barrier to entry for non-power users.
- **The Growth Mode Restructure:** Goal-first grouping ("Sell Something") is infinitely better than a flat list of 18 tools. The shared "About Your Brand" header removes the friction of repetitive data entry.

4. Action Plan

1. **Rewrite** `pmg-unified-panel-spec.md` : Incorporate the "Make It Yours" tab rename, the "Know Your Audience" group rename, the accordion behavior, and the Reset button UI fix.
2. **Update** `pricing.html` , `guide.html` , and `manual.html` : Replace all stale references to the old ECC tabs and Growth Mode structure with the new copy.
3. **Update** `app.html` : Fix the `expert-warning-dialog` copy to reflect the new ECC tabs.
4. **Update Docs:** Rewrite the relevant sections in `replit.md` , `docs/gotchas.md` , and `docs/scripts.md` so Replit has accurate context.
5. **Deliver the Final Package:** Present the updated spec and a clear list of the copy changes made across the site.
