

PromptMeGood: Traffic Readiness Action List

This document outlines everything that needs to be addressed before driving significant traffic to PromptMeGood. The layout and UX fixes are already in progress via the Replit briefs. This list covers SEO, conversion, content accuracy, and retention.

1. Fix the Landing Page Redirect (Critical)

The Issue: The landing page exists and it is excellent — but nobody sees it. The root domain (`promptmegood.com`) runs a JavaScript redirect that sends every visitor straight to `/app` before the landing page ever renders.

What the Landing Page Currently Says:

Section	Content
Hero Headline	"AI That Finally Gets What You Mean"
Hero Subtext	"Most people get bad AI answers because AI doesn't understand what they actually want. PromptMeGood fixes your prompt instantly — so you get the result you meant to ask for."
Primary CTA	"Fix My Prompt — It's Free" / "No Signup. Works In Seconds."
Secondary CTA	"See What It Can Do" / "Real Examples, Real Results"
Trust Bar	Works In Seconds • No Signup Needed • Free During Early Access • Used In 10+ Countries
Hero Testimonial	"Cut my prompt-rewriting time in half — I'm landing usable lyrics and ad copy on the first try now." — Calvin M., Musician
Use Cases	6 clickable cards: Make Money With AI, Start A Business, Create Viral Content, Write Better Emails, Build A Product Page, Solve A Personal Problem
How It Works	3 steps: Describe what you need → Click Generate → Copy and use anywhere

Social Proof	3 testimonial cards (Sarah M., Marcus T., Janelle R.)
See The Difference	3 Before/After prompt comparison examples

The Fix: Remove or modify the JavaScript redirect on the root `index.html` so that `promptmegood.com` shows the landing page first. Users should only go to `/app` when they click the primary CTA ("Fix My Prompt — It's Free").

2. Fix the Stale Testimonial (Critical)

The Issue: One of the three testimonial cards on the landing page reads:

"Help Me Start walked me through everything in under two minutes. I didn't have to think about prompt structure at all." — Marcus T., Small Business Owner

"Help Me Start" no longer exists in the app. Any user who reads this testimonial, gets excited about that feature, and then can't find it in the app will feel deceived and confused. This needs to be updated before traffic arrives.

The Fix: Replace Marcus T.'s quote with one that references a feature that actually exists — such as the Expert Command Center, the Start Fast pills, or the Before/After examples.

3. Onboarding & "Aha!" Moment (High Priority)

The Issue: Even with the UX cleaned up, a first-time user staring at an empty text box may experience "blank canvas syndrome." The Start Fast pills help, but they are not prominent enough above the fold.

The Fix: Consider pre-filling the text box with a high-quality example goal on the very first visit so the user only has to click "Analyze My Idea" to immediately see the tool's value. A lightweight tooltip sequence pointing to the main input and the generate button would also reduce drop-off significantly.

4. SEO & Social Sharing (Medium Priority)

The Issue: The foundational SEO is solid — meta tags, robots.txt, sitemap, and OG tags are all in place. The one gap is the OpenGraph image.

The Fix: Update `opengraph.jpg` to a high-resolution, visually striking image that clearly shows a Before/After prompt example. The current image is functional but generic. A

compelling OG image is the single most impactful thing you can do for social sharing, since it is the first thing people see when a link is shared on Twitter, LinkedIn, or iMessage.

5. Retention & "Next Steps" (Medium Priority)

The Issue: After a user generates a prompt and copies it, there is no strong hook to bring them back. The session ends and the user is gone.

The Fix: After the first successful generation, show a subtle toast notification: "Prompt copied! Want to save it for later? Open the Vault." This surfaces the Vault at the exact moment the user has experienced value, making them far more likely to engage with it and return.

Summary of Priorities

Priority	Action	Impact
1	Fix the redirect so the landing page actually shows	Conversion — cold traffic needs context before the app
2	Replace the stale "Help Me Start" testimonial	Trust — do not promise a feature that doesn't exist
3	Add lightweight onboarding to guide first-time users	Activation — reduce blank canvas drop-off
4	Update the OpenGraph image to show Before/After	Social sharing — first impression on every shared link
5	Add a Vault promotion toast after first generation	Retention — hook users at the moment of peak value
