

Replit Fix Brief: Photography Suite "Epic" Upgrade

Replit, we are overhauling the Photography Suite to make it a cutting-edge, professional-grade AI image prompt builder. We need to add several advanced features, toggles, and expert guidance panels to help users generate hyper-realistic, cinematic, and highly controlled images.

Please implement the following features into the Photography Suite (`pmg-visual-studio.js` , `pmg-visual-studio.css` , and the main HTML layout).

1. The "Base Style" Toggle (Photographic vs. Digital Art)

Users need a clear choice between true realism and stylized digital art. This toggle will fundamentally change the base prompt structure.

HTML Structure (Place near the top of the Photography panel):

HTML

```
<div class="pmgv3-photo-style-toggle">
  <label class="pmgv3-section-label">Base Style</label>
  <div class="pmgv3-toggle-group">
    <button type="button" class="pmgv3-toggle-btn is-active" data-style="photog
    <button type="button" class="pmgv3-toggle-btn" data-style="digital">🎨 Digi
  </div>
  <p class="pmgv3-style-hint" id="style-hint-photographic">Forces real-world ca
  <p class="pmgv3-style-hint" id="style-hint-digital" style="display:none;">Opt
</div>
```

Logic:

- When "Photographic" is selected, append: Shot on high-end DSLR, raw photo, unedited, photorealistic, natural lighting, sharp focus.
- When "Digital" is selected, append: Unreal Engine 5 render, octane render, cinematic lighting, hyper-detailed, digital illustration, masterpiece.

2. Advanced Lighting & Environment Studio Accordion

Lighting makes or breaks AI realism. Add a new accordion section specifically for lighting and environment control.

HTML Structure (Add as a new accordion section):

HTML

```
<div class="pmg-vs-photo-accordion">
  <button type="button" class="pmg-vs-photo-acc-header">
    <span class="pmg-vs-photo-acc-title">💡 Lighting & Environment Studio</span>
    <span class="pmg-vs-photo-acc-chevron">▼</span>
  </button>
  <div class="pmg-vs-photo-acc-content">
    <div class="pmg-tune-pills">
      <button type="button" class="pmg-tune-pill" data-prompt="golden hour ligh
      <button type="button" class="pmg-tune-pill" data-prompt="neon cyberpunk l
      <button type="button" class="pmg-tune-pill" data-prompt="moody cinematic
      <button type="button" class="pmg-tune-pill" data-prompt="harsh flash phot
      <button type="button" class="pmg-tune-pill" data-prompt="soft softbox lig
      <button type="button" class="pmg-tune-pill" data-prompt="blue hour, cool
    </div>
  </div>
</div>
```

3. The "Negative Prompt" Vault (Auto-Applied)

AI generators need strong negative prompts to avoid the "uncanny valley." We will auto-apply a robust negative prompt based on the selected Base Style.

Logic (In `pmg-visual-studio.js` during prompt generation):

- If "Photographic" is active, append this negative prompt block to the final output:

```
--no ugly, deformed, extra limbs, cartoon, illustration, 3d render, smooth skin, plastic, watermark, text, asymmetrical face, distorted eyes
```

- If "Digital" is active, append:

```
--no low quality, worst quality, blurry, pixelated, watermark, text, signature, bad anatomy
```

4. Expert Guidance Panel: Family Photos & Face Consistency

Add a dedicated tips panel to guide users on how to get accurate faces, especially for family photos.

HTML Structure (Place below the main input area or inside a "Pro Tips" accordion):

HTML

```
<div class="pmgv3-expert-tips-panel">
  <div class="tips-header">
    <span class="tips-icon">🧠</span>
```

```

    <strong>Pro Tip: Accurate Faces & Family Photos</strong>
  </div>
  <div class="tips-content">
    <ul>
      <li><strong>Use Reference Images:</strong> In tools like Midjourney, prov
      <li><strong>Prompt Like a Photographer:</strong> Avoid generic terms. Use
      <li><strong>Face Restoration:</strong> If faces look "plasticky," use too
      <li><strong>Combine Photos:</strong> For groups, it's often better to gen
    </ul>
  </div>
</div>

```

5. CSS Styling for New Elements

Add these styles to `pmg-visual-studio.css` :

CSS

```

/* Style Toggle */
.pmgv3-toggle-group {
  display: flex;
  gap: 8px;
  margin-bottom: 8px;
}
.pmgv3-toggle-btn {
  flex: 1;
  padding: 10px;
  background: rgba(255, 255, 255, 0.05);
  border: 1px solid rgba(255, 255, 255, 0.1);
  border-radius: 8px;
  color: #fff;
  cursor: pointer;
  transition: all 0.2s ease;
}
.pmgv3-toggle-btn.is-active {
  background: rgba(0, 200, 150, 0.15);
  border-color: #00c896;
  color: #00c896;
  font-weight: 600;
}
.pmgv3-style-hint {
  font-size: 12px;
  color: rgba(255, 255, 255, 0.6);
  margin: 0 0 16px 0;
}

/* Expert Tips Panel */

```

```
.pmgv3-expert-tips-panel {
  background: rgba(0, 200, 150, 0.05);
  border: 1px solid rgba(0, 200, 150, 0.2);
  border-radius: 12px;
  padding: 16px;
  margin: 20px 0;
}

.pmgv3-expert-tips-panel .tips-header {
  display: flex;
  align-items: center;
  gap: 8px;
  margin-bottom: 12px;
}

.pmgv3-expert-tips-panel .tips-header strong {
  color: #00c896;
  font-size: 14px;
}

.pmgv3-expert-tips-panel .tips-content ul {
  margin: 0;
  padding-left: 20px;
  color: rgba(255, 255, 255, 0.8);
  font-size: 13px;
  line-height: 1.5;
}

.pmgv3-expert-tips-panel .tips-content li {
  margin-bottom: 8px;
}
```
