

Replit Fix Brief: Text Prompting Suite "Epic" Upgrade (With User-Friendly Descriptions)

Replit, we are upgrading the core Text Prompting Suite to incorporate the most advanced prompt engineering techniques of 2025-2026. Crucially, we need to add **plain-English descriptions** for every feature so non-technical users instantly understand what each option does and why they would use it.

Please implement the following features into the Text Prompting Suite (`pmg-chassis-v3.js` , `pmg-chassis-v3.css` , and the main HTML layout).

1. Advanced Reasoning Frameworks (The "Brain" Toggle)

Users need the ability to inject advanced reasoning structures into their prompts, but explained simply.

HTML Structure (Add to the Tuning Section):

HTML

```
<div class="pmgv3-reasoning-frameworks">
  <label class="pmgv3-section-label">How should the AI think?</label>
  <select id="pmgv3-reasoning-select" class="pmgv3-select">
    <option value="standard">Standard (Just give me the answer)</option>
    <option value="cot">Step-by-Step (Best for math, logic, or planning)</option>
    <option value="cad">Break It Down (Best for massive, complex projects)</option>
    <option value="mps">Multiple Perspectives (Best for debates or strategy)</option>
  </select>
  <p class="pmgv3-style-hint" id="reasoning-hint">Standard: Fast and direct. Step-by-Step: Detailed reasoning. Break It Down: Structured analysis. Multiple Perspectives: Diverse viewpoints.
</div>
```

Logic (In `pmg-chassis-v3.js` during prompt generation):

- **Step-by-Step (CoT):** Append `Before providing the final answer, please think step-by-step. Break down your reasoning process clearly.`
- **Break It Down (CAD):** Append `Please solve this by: 1) Identifying the core components of the problem. 2) Solving each component individually. 3) Synthesizing the partial solutions into a holistic final answer.`
- **Multiple Perspectives (MPS):** Append `Please analyze this from at least 3 distinct perspectives. For each, articulate its core assumptions and strongest arguments before providing an integrated conclusion.`

2. Calibrated Confidence & Hallucination Control

Give users a way to force the AI to admit when it doesn't know something, explained as a "No Guessing" mode.

HTML Structure (Add as a toggle switch in the Tuning Section):

HTML

```
<div class="pmgv3-confidence-toggle">
  <label class="pmgv3-switch">
    <input type="checkbox" id="pmgv3-calibrated-confidence">
    <span class="pmgv3-slider"></span>
  </label>
  <div class="pmgv3-switch-text">
    <span class="pmgv3-switch-label">Strict Fact-Checking Mode</span>
    <p class="pmgv3-switch-hint">Forces the AI to tell you how confident it is
  </div>
</div>
```

Logic:

- If checked, append: For each factual claim you make, assign an explicit confidence level (e.g., Highly Confident, Speculative, Unknown). Prioritize accurate confidence calibration over making definitive statements. If you do not know, explicitly state that you lack sufficient information.

3. The "Recursive Self-Improvement" Auto-Boost

Upgrade the existing "Auto-Boost" feature to use Recursive Self-Improvement Prompting (RSIP).

Logic Update for Auto-Boost:

Instead of just rewriting the prompt once, the Auto-Boost prompt sent to the backend should instruct the AI to critique and improve the prompt iteratively.

Internal Prompt for Auto-Boost: Take the user's goal and create an optimized prompt. Then, critically evaluate your own output, identify 2 weaknesses, and create an improved version. Present only the final, most refined version.

4. Target Audience & Persona Injector

A dedicated section for defining exactly who the output is for, which drastically changes the AI's tone and vocabulary.

HTML Structure (Add to the Tuning Section):

HTML

```
<div class="pmgv3-audience-injector">
  <label class="pmgv3-section-label">Who is this for?</label>
  <input type="text" id="pmgv3-target-audience" class="pmgv3-input" placeholder="Target Audience" />
  <p class="pmgv3-style-hint">The AI will automatically adjust its vocabulary,
</div>
```

Logic:

- If filled, append: Tailor your vocabulary, tone, and examples specifically for this target audience: [User Input].

5. CSS Styling for New Elements

Add these styles to pmg-chassis-v3.css :

CSS

```
/* Select Dropdown */
.pmgv3-select {
  width: 100%;
  padding: 10px 12px;
  background: rgba(255, 255, 255, 0.05);
  border: 1px solid rgba(0, 200, 150, 0.3);
  border-radius: 8px;
  color: #fff;
  font-size: 14px;
  margin-bottom: 8px;
  appearance: none;
}
.pmgv3-select:focus {
  outline: none;
  border-color: #00c896;
}

/* Toggle Switch with Hint */
.pmgv3-confidence-toggle {
  display: flex;
  align-items: flex-start;
  gap: 12px;
  margin: 20px 0;
  background: rgba(0, 200, 150, 0.05);
  padding: 12px;
  border-radius: 8px;
  border: 1px solid rgba(0, 200, 150, 0.15);
}
.pmgv3-switch {
```

```
position: relative;
display: inline-block;
width: 40px;
height: 22px;
flex-shrink: 0;
margin-top: 2px;
}
.pmgv3-switch input {
  opacity: 0;
  width: 0;
  height: 0;
}
.pmgv3-slider {
  position: absolute;
  cursor: pointer;
  top: 0; left: 0; right: 0; bottom: 0;
  background-color: rgba(255, 255, 255, 0.1);
  transition: .4s;
  border-radius: 22px;
}
.pmgv3-slider:before {
  position: absolute;
  content: "";
  height: 16px;
  width: 16px;
  left: 3px;
  bottom: 3px;
  background-color: white;
  transition: .4s;
  border-radius: 50%;
}
input:checked + .pmgv3-slider {
  background-color: #00c896;
}
input:checked + .pmgv3-slider:before {
  transform: translateX(18px);
}
.pmgv3-switch-text {
  display: flex;
  flex-direction: column;
  gap: 4px;
}
.pmgv3-switch-label {
  font-size: 14px;
  font-weight: 600;
  color: #fff;
}
.pmgv3-switch-hint {
```

```
margin: 0;
font-size: 12px;
color: rgba(255, 255, 255, 0.6);
line-height: 1.4;
}

/* Input Field */
.pmgv3-input {
width: 100%;
padding: 10px 12px;
background: rgba(255, 255, 255, 0.05);
border: 1px solid rgba(255, 255, 255, 0.1);
border-radius: 8px;
color: #fff;
font-size: 14px;
box-sizing: border-box;
margin-bottom: 8px;
}
.pmgv3-input:focus {
outline: none;
border-color: #00c896;
}
```
