

PromptMeGood Right Column UX Fill

CORE OBJECTIVE

The right column (`.pmgv3-right`) currently displays the placeholder card ("Your Optimized Prompt Will Appear Here") at the top, leaving a massive blank void below it on desktop screens.

This brief instructs Replit to fill that blank space with a combination of **Live Prompt Examples** and **Template Spotlights** to educate the user and drive conversions, without altering the existing layout structure.

WHAT TO BUILD

Inside the `.pmgv3-right-placeholder` container, directly below the existing 3-step list, append a new section called `.pmgv3-inspiration-feed` .

This section will contain two parts:

1. The "See What's Possible" Block (Examples)

Show 2 beautifully styled cards that demonstrate the transformation PromptMeGood provides. Each card must show a raw "Before" input and the polished "After" output.

Layout Constraint (Horizontal): The "Before" and "After" sections within each card **MUST** be laid out horizontally side-by-side on desktop (e.g., using `display: flex; flex-direction: row; gap: 1rem;`). On mobile screens, they should stack vertically (`flex-direction: column;`).

- **Card 1: For a Creator**
 - *Before (Left side):* "write me a youtube hook about [topic]"
 - *After (Right side):* "Act as a viral YouTube strategist. Write a 60-second hook for a video about [TOPIC]. Use high-retention pacing, open loops, and a conversational tone."
- **Card 2: For a Business Owner**
 - *Before (Left side):* "write a product description for [product]"
 - *After (Right side):* "Write a high-converting product description for [PRODUCT]. Focus on emotional benefits over features, use bullet points for readability, and end with a strong CTA."

2. The "Start Fast" Block (Templates)

Show 3 clickable template pills/cards. When clicked, these should behave exactly like the existing template library — pre-filling the `#goal` textarea on the left.

Layout Constraint (Horizontal): These 3 pills MUST be laid out horizontally in a single row on desktop (e.g., `display: flex; flex-direction: row; gap: 0.5rem; flex-wrap: wrap;`).

- **Template 1:** "Write a cold email that gets replies"
 - **Template 2:** "Fix my website's landing page copy"
 - **Template 3:** "Brainstorm 10 viral TikTok ideas"
-

DESIGN & BEHAVIOR RULES

1. **Visibility:** This entire `.pmgv3-inspiration-feed` section MUST be hidden when the `pmg-has-result` class is added to the body (just like the rest of the placeholder). It only exists in the pre-generation state.
2. **Styling:**
 - The "Before" text should look slightly dimmer or use a distinct style (e.g., a chat bubble or muted text) to represent raw user input.
 - The "After" text should look like mini versions of the final result panel (dark green background, subtle border) to represent the high-value output.
 - The template pills should look like the existing category pills.
3. **No Layout Breakage:** Do not change the width, height, or flex properties of the parent `.pmgv3-right` column. This content simply flows naturally below the existing placeholder text.
4. **Mobile Handling:**
 - Ensure the `.pmgv3-inspiration-feed` and its cards have `max-width: 100%`, `overflow-wrap: break-word`, and `box-sizing: border-box` so they never force the screen to spill over horizontally on mobile.
 - The horizontal Before/After layout must collapse to vertical stacking on mobile screens (`@media (max-width: 768px)`).

IMPLEMENTATION

1. Update `pmg-chassis-v3.js` (or wherever the placeholder HTML is generated) to include the new `.pmgv3-inspiration-feed` HTML structure.
2. Add the necessary CSS to `pmg-chassis-v3.css` to style the new elements, strictly enforcing the horizontal flex layouts for desktop and vertical stacking for mobile.

3. Wire the 3 template pills to the existing template selection logic so they correctly populate the `#goal` textarea when clicked.
