

PMG Tuning Upgrades Spec (v3)

Project: PromptMeGood (PMG)

Target: July 1, 2026 Launch

Scope: 6 new tuning features, UI updates, and paywall logic

Pre-Execution Audit Checklist

Before writing any code, Replit MUST verify the following:

- ☐ Confirm `pmg-quick-modes.js` exists and controls the Quick Modes chip row.
- ☐ Confirm `pmg-chassis-v3.css` hides `#advanced-options` with `display: none !important`.
- ☐ Confirm `ai.ts` has `moneyMode`, `humanTone`, `clarityBoost`, and `expertMode` in `StructuredPayload`.
- ☐ Confirm `ai.ts` has `buildUserMessageFromPayload()` handling the existing modes.
- ☐ Confirm `app.html` has the `.btn-analyze` button and the `#tour-banner`.

Feature 1: Feature Entry Row

Goal: Add two side-by-side buttons above the "🌟 Build My Prompt" button to access Growth Mode and Expert Center.

Implementation:

- **Location:** `app.html`, immediately above the `.btn-analyze` button.
- **Layout:** Two side-by-side buttons on ALL screen sizes (including mobile — no stacking).
- **Labels:** "🛒 Growth Mode" and "🔮 Expert Center".
- **Actions:** Trigger existing topbar icon click handlers.
- **Style:** Secondary outlined style, must not compete visually with `.btn-analyze`.
- **Spacing:** 16px+ spacing between the entry row and `.btn-analyze`.
- **Paywall Logic:** Free users see the buttons at all times. NO lock icon overlay. Clicking them triggers the existing paywall card if `isPaywallActive()` is true (post-July 1). During beta, buttons open normally for everyone.

Feature 2: Rescue 3 Hidden Toggles

Goal: Surface Growth Mode, Human Voice, and Clarity Boost in the Tune panel without un-hiding `#advanced-options`.

Implementation:

- **File:** `pmg-quick-modes.js`
- **Action:** Add Growth Mode, Human Voice, and Clarity Boost as visible chips/toggles inside the `mountModesRow` function.
- **Descriptions:**
 - Growth Mode: "Adds a sales and marketing lens to your prompt — practical, results-driven, conversion-focused. Turns on automatically when your goal sounds business-related."
 - Human Voice Mode: "Softens the robotic edge. Your prompt will ask the AI to write like a person, not a machine."
 - Clarity Boost Mode: "Structures the output so it is easier to read and act on. Good for anything where you need a clear, organized response."
- **Constraint:** DO NOT remove the chassis CSS hide rule on `#advanced-options` .
- **Paywall Logic:** FREE for all tiers. No paywall. (Note: The Growth Mode *chip* is free; the Growth Mode *drawer* is paid).

Feature 3: Interview Mode Toggle

Goal: Add an Interview Mode toggle that changes the AI's behavior to ask clarifying questions before generating the prompt.

Implementation:

- **Frontend:** Add to `pmg-quick-modes.js` Quick Modes row.
- **Description:** "Before the AI starts working, it asks you a few questions to make sure it understands what you really need. Fewer surprises, better results."
- **Backend (`ai.ts`):**
 - Add `interviewMode` (boolean) to `StructuredPayload` .
 - Update `buildUserMessageFromPayload()` to include `interviewMode` .
 - **System Prompt:** Add a separate branch. If `interviewMode` is true, swap to a clarifying-questions prompt instead of the standard generate prompt.
- **Paywall Logic (Tier Split):**
 - **Free Tier:** Client-side only. When a free user toggles Interview Mode, PMG uses a lightweight local template to generate 3 smart clarifying questions based on the selected category/tone/goal length. Zero API cost, zero cap impact.

- **Paid Tiers (Founding/Pro/Studio):** AI-powered. Fires a call to `/generate` using the clarifying-questions system prompt branch. This call is **cap-exempt** (does not count against the daily Run With AI limit).

Feature 4: Target Model Selector

Goal: Add a selector for the target AI model, applying Claude-specific XML formatting when selected.

Implementation:

- **Frontend:** Add as a new select/chip in the tune panel (following `pmg-tune-chips.js` pattern).
- **Options:** Universal (default), Claude, ChatGPT, Gemini, Perplexity.
- **Description:** "Which AI are you sending this prompt to? We'll format it the way that AI works best — Claude gets structured tags, Gemini gets examples up front, ChatGPT gets numbered steps."
- **Backend (`ai.ts`):**
 - Add `targetModel` (string) to `StructuredPayload` .
 - Update `buildUserMessageFromPayload()` to include `targetModel` .
 - **System Prompt:** Add ONE routing rule: only when `targetModel === 'claude'` , wrap context in XML tags.
- **Paywall Logic:** FREE for all tiers. No paywall.

Feature 5: Framework Selector

Goal: Add a selector for prompt frameworks (RISE, CARE, Step-by-Step).

Implementation:

- **Frontend:** Add as a new select/chip in the tune panel.
- **Options:** Auto (default), RISE, CARE, Step-by-Step.
- **Description:** "Choose how your prompt is organized. RISE builds prompts around a Role, Input, Steps, and Execution. CARE focuses on Context, Action, Result, and Example. Step-by-Step walks the AI through your problem step by step. Auto lets PMG pick the best fit for your goal."
- **Backend (`ai.ts`):**
 - Add `framework` (string) to `StructuredPayload` .
 - Update `buildUserMessageFromPayload()` to include `framework` .

- **System Prompt:** Add override rule: "If Framework is specified, use that structure instead of auto-selection rules."
- **Paywall Logic:** FREE for all tiers. No paywall.

Feature 6: Cleanup

Goal: Clean up redundant UI elements and descriptions.

Implementation:

- **Verify:** Ensure `pmg-quick-modes.js` hides `#expert-mode-link`.
- **Update `app.html` :**
 - Line 5068: Update Growth Mode toggle description (remove topbar reference).
 - Line 5058: Update Advanced Output Settings subtitle (remove "Growth Mode" from subtitle).

Verification Checklist

Before submitting, Replit MUST verify:

- ☐ Feature entry row is side-by-side on mobile.
- ☐ Feature entry row buttons trigger the correct panels and show the paywall card for free users post-July-1 (no lock icon).
- ☐ `#advanced-options` remains hidden by CSS.
- ☐ Growth Mode, Human Voice, and Clarity Boost are visible in the Quick Modes row.
- ☐ Interview Mode toggle exists and triggers the correct tier-split logic (client-side for free, cap-exempt AI for paid).
- ☐ Target Model selector exists and applies XML formatting ONLY for Claude.
- ☐ Framework selector exists and overrides auto-selection in the system prompt.
- ☐ All new controls have the exact approved descriptions.
- ☐ Cleanup tasks in `app.html` are complete.
- ☐ No existing functionality is broken.
