

PromptMeGood Placeholder Fix Brief

CORE OBJECTIVE

The "Your Optimized Prompt Will Appear Here" placeholder in the right column is hidden on page load and only appears when the user clicks the logo button. This brief provides the exact fix to ensure the placeholder is visible on initial load.

BUG: PLACEHOLDER HIDDEN ON LOAD

The Problem:

The placeholder (`#pmgv3-right-placeholder`) is injected correctly by `pmg-chassis-v3.js` , but it is being hidden by a combination of CSS and JS initialization logic. Specifically, the `doStartOver()` function (which is called when the logo is clicked) resets the state and makes it visible, but the initial boot sequence does not set the correct state.

The Fix:

1. In `pmg-chassis-v3.js` : Ensure the placeholder is explicitly shown during the `boot()` sequence, just like it is during `doStartOver()` .
 - Locate the `boot()` function.
 - After `wireActions();` and `wirePersistence();` , add a call to explicitly remove the `pmg-has-result` class from the body, which ensures the placeholder is not hidden by the CSS rule `.pmg-has-result .pmgv3-right-placeholder { display: none !important; }` .
 - Example: `document.body.classList.remove('pmg-has-result');`
2. In `pmg-chassis-v3.css` : Verify that there are no other conflicting rules hiding `.pmgv3-right-placeholder` on desktop. The mobile media query (`max-width: 768px`) tightens the padding but does not hide it, which is correct.

IMPLEMENTATION STEPS

1. Update `pmg-chassis-v3.js` to ensure `document.body.classList.remove('pmg-has-result');` is called during initialization.
2. Verify the placeholder appears on first load without requiring a logo click.
