

PromptMeGood: Final Audit Findings (SEO, Legal, Social)

I completed the final deep dive into the site's readiness for traffic, focusing on indexability, legal compliance, and social presence. Here is the good news and the remaining action items.

The Good News

- Google Indexability is Perfect:** Your `robots.txt` is correctly configured to allow all major search engines (Google, Bing) while explicitly allowing AI crawlers (GPTBot, ClaudeBot, PerplexityBot). This is a smart move — it ensures PromptMeGood can be cited as a source by AI answer engines. The `sitemap.xml` is also perfectly formatted.
- Legal Pages are Solid:** Your `terms.html` is comprehensive. It explicitly covers the \$79 Founding Member tier, Stripe payment processing, AI content ownership, and limitation of liability. It is fully ready for traffic and payments.
- Social Links Work:** The footer links to TikTok, Instagram, YouTube, and X (Twitter) all return healthy 200 status codes. There are no broken social links.

The Remaining Action Items

1. The "Review" Page is Exposed (Medium Priority)

The Issue: The `/review.html` page is live and accessible to the public. It is titled "Code Review (Dev Only)" and contains a button that triggers a backend `/api/review` endpoint.

- **Impact:** If a curious user or a bot finds this page and clicks the button, they could trigger unnecessary backend compute or potentially expose internal dev logs.
- **The Fix:** Replit should either delete `review.html` from the public build or put it behind an authentication check so only admins can access it.

2. The Contact Link is a "Mailto" (Low Priority)

The Issue: The "Contact" link in the footer is a simple `mailto:support@promptmegood.com` link.

- **Impact:** This is fine for early days, but it exposes your support email to spam bots.
- **The Fix:** Eventually, you will want to replace this with a simple contact form (connected to Supabase or a service like Formspree) to protect your inbox and capture structured feedback.

Summary of Next Steps for Replit

If you want to hand these final cleanup items to Replit, the instructions should be:

1. **"Remove `review.html` from the public build or secure it behind admin authentication, as it exposes a dev-only backend endpoint."**
2. *(Optional)* **"Replace the `mailto:` contact link in the footer with a simple contact form to prevent spam."**
