

PromptMeGood Missing Features Fix Brief

CORE OBJECTIVE

Two key features are missing from the live site:

1. The pre-generate "Help Me Start" modal (4 clarifying questions).
2. The Auto-Boost button.

This brief provides the exact root causes and the targeted fixes to restore both features without breaking the v3 chassis layout.

BUG 1: MISSING "HELP ME START" MODAL

The Problem:

The "Help Me Start" button (`#guided-mode-btn`) and its wrapper (`#guided-cta-row`) still exist in `index.html` . However, `pmg-ux.js` (Task 139) explicitly hides them via CSS (`#guided-cta-row { display: none !important;}`) and stubs out the `setupHelpMeStartButton()` function, stating it was "removed entirely per user request."

The Fix:

The user wants this feature back.

1. In `pmg-ux.js` : Remove the CSS rule `#guided-cta-row { display: none !important;}` (around line 801).
 2. In `pmg-ux.js` : Restore the functionality of `setupHelpMeStartButton()` or ensure the native click handler in `index.html` (which calls `clickById('guided-mode-btn')`) is allowed to fire and open the modal.
 3. In `pmg-chassis-v3.css` : Ensure the button is styled appropriately for the v3 layout (e.g., placed near the goal textarea or generate button).
-

BUG 2: MISSING AUTO-BOOST BUTTON

The Problem:

The Auto-Boost button is missing because of a conflict between `pmg-auto-boost.js` and `pmg-chassis-v3.css` .

1. `pmg-auto-boost.js` (version `ab-5-always-show`) mounts the button *after* the `.output-box` wrapper to keep it visible before generation.

2. However, `pmg-auto-boost.css` was updated to remove the `ab-5-always-show` force-show rules (which previously caused the button to float at the top of the right column).
3. Now, the button respects the `[hidden]` attribute and the chassis CSS, but because it is mounted outside the result panel, it either gets hidden by a parent container or lacks the CSS to display correctly in its new location.

The Fix:

The Auto-Boost button should be visible *before* generation, but it must be placed correctly within the layout.

1. In `pmg-auto-boost.js` : Change the `mountTarget` for the text suite. Instead of mounting after the `.output-box` wrapper (which causes layout issues), mount it inside the `.pmgv3-generate-host` or immediately before the `#generateBtn` . This places it logically in the pre-generation flow.
 - Update `mountTarget` to return `document.getElementById('generateBtn')` and set `cardPosition: 'before'` .
2. In `pmg-auto-boost.css` : Ensure the button is styled to fit next to or above the Generate button, without relying on `!important` overrides that break the chassis collapse logic.

IMPLEMENTATION STEPS

1. Un-hide `#guided-cta-row` in `pmg-ux.js` and restore the modal trigger.
2. Remount the Auto-Boost button near the Generate button in `pmg-auto-boost.js` so it is visible pre-generation without breaking the right column layout.
