

PMG Paywall Decisions — 6 New Features (v2)

Tier Reference

Tier	Price	Status
Free	\$0	Live
Trial (first 7 days)	\$0	Live
Founding Member	\$79 one-time	Live (first 500)
Pro Monthly	\$14/mo	Launches July 1, 2026
Pro Yearly	\$129/yr	Launches July 1, 2026
Pro Studio Monthly	\$29/mo	Launches July 1, 2026
Pro Studio Yearly	\$290/yr	Launches July 1, 2026

Paywall activates: July 1, 2026 (`BETA_END = "2026-07-01T05:00:00.000Z"`). Before that date, `isPaywallActive()` returns false and all features are open to everyone.

Feature Paywall Decisions

Feature 1 — Feature Entry Row (Growth Mode + Expert Center buttons above Build My Prompt)

Decision: Free users see the buttons at all times. Clicking them post-July 1 fires the paywall card.

Rationale: The buttons are navigation shortcuts to the Growth Mode drawer and Expert Command Center — both of which are already paid features post-July 1. Showing the buttons to free users is the right conversion surface. Hiding them entirely would remove the discovery moment. The buttons themselves cost nothing to render; the paywall fires when the user actually tries to open the drawer or the ECC. We are NOT using a lock icon overlay, as the paywall card is already the established pattern.

Implementation rule: After July 1 (`isPaywallActive() === true`), free users clicking either button see the existing upgrade/paywall card. During beta, buttons open normally for

everyone. The entry row itself is always visible — the gate is on the destination, not the button.

Feature 2 — Rescued Toggles: Growth Mode chip, Human Voice chip, Clarity Boost chip

Decision: All three chips are FREE forever — no paywall, no tier gate.

Rationale: These are per-prompt tuning directives that live in the Quick Modes chip row. They have always been in the DOM and functional; we are just surfacing them visually. They do not call any additional AI endpoint — they modify the user message sent to the existing `/generate` route, which already has its own daily cap. Gating these chips would add friction to the core free experience with no unit-economics benefit. The Growth Mode *drawer* (Brand Voice, Social Packs, Platform Builder) is paid; the Growth Mode *chip* (per-prompt sales/marketing lens) is free.

Copy distinction to maintain everywhere: "Growth Mode chip/toggle = free, per-prompt directive. Growth Mode drawer = paid, full marketing suite."

Feature 3 — Interview Mode toggle

Decision: FREE for all tiers, but implemented differently based on tier.

Rationale: Interview Mode changes the system prompt branch to ask clarifying questions instead of generating immediately.

- **Free Tier:** Uses a client-side template to generate 3 smart clarifying questions based on the selected category/tone/goal length. Zero API cost, zero cap impact.
 - **Paid Tiers (Founding/Pro/Studio):** Uses a real AI call to `/generate` with the clarifying-questions system prompt branch. This call is **cap-exempt** (does not count against the daily Run With AI limit).
-

Feature 4 — Target Model selector

Decision: FREE for all tiers.

Rationale: Target Model is a formatting hint only. Only Claude actually changes the output (XML tags); all other selections produce identical output to "Universal." There is no additional AI call, no additional cost. It is a UX convenience that makes prompts more useful on the destination platform. Gating it would be confusing since it costs nothing to offer.

Feature 5 — Framework selector (RISE / CARE / Step-by-Step)

Decision: FREE for all tiers.

Rationale: Framework is a structural directive added to the system prompt, identical in cost to any other tuning field. It uses the same `/generate` route and the same daily cap. Gating it would be arbitrary — it is no more expensive than choosing a tone or output format, both of which are free.

Feature 6 — Cleanup (ECC link, Growth Mode description, subtitle)

Decision: No paywall — this is copy/UI cleanup only.

Stale Copy Locations Map

Every location that needs updating when the 6 features ship:

File	Location	What is stale
app.html	Line ~5058	adv-sub subtitle still says "Growth Mode (tuning directive), Human Voice, Clarity Boost" — this section is hidden but the subtitle should be updated to remove the topbar reference from the Growth Mode description
app.html	Line ~5068	Growth Mode toggle description still says "use the  Growth Mode drawer in the topbar" — remove topbar reference
app.html	Structured data featureList	Does not mention Interview Mode, Target Model, or Framework
app.html	FAQ structured data Q1	Does not mention new tuning features
guide.html	Section 3.7 Growth Mode	Correctly distinguishes chip vs drawer but needs Interview Mode, Target Model, Framework added

guide.html	TOC	Missing Interview Mode, Target Model, Framework sections
guide.html	Topbar legend	Correct — no change needed
manual.html	Section 3.2 Auto-Tune	Does not mention new fields (targetModel, framework, interviewMode)
manual.html	Section 3.3 Tune Your Prompt	Does not mention new selectors
manual.html	Section 3.7 Growth Mode	Correct distinction but needs new features added nearby
manual.html	Section 10 Limits table	Free Run cap shows "3/day" — actual cap is 2/day (stale from pricing-rebalance-1)
pricing.html	Free tier feature list	Does not mention new free features (Interview Mode, Target Model, Framework chips)
pricing.html	Founding/Pro/Studio feature lists	Should mention new features as included
pricing.html	FAQ "What is the difference between free and paid?"	Does not mention new features
pricing.html	FAQ "What happens after beta ends?"	Should mention new features stay free
index.html	Feature cards	Does not mention Interview Mode, Target Model, Framework
index.html	OG description	Still says "Power features free for everyone through July 1, 2026" — needs update post-launch
index.html	Trust section beta copy	References old feature list
app.html	OG/Twitter title	Still says "Free ChatGPT & DALL-E Prompt Generator" — undersells new features
app.html	<title>	Same — undersells
sitemap.xml	All <lastmod> dates	All show 2026-05-08 — need update to reflect new content
