

Growth Mode 2.0 Implementation Spec

To: Replit / Engineering

From: Product Strategy

Status: Approved for Build

This document contains the complete specification for Growth Mode 2.0. It replaces the existing `pmg-business-mode.js` implementation with a two-lane architecture (Business vs. Creator) based on 2026 market research.

CRITICAL: Build this exactly as specified. Do not skip the pre-execution audit or the verification checklist.

1. Pre-Execution Audit (Do This First)

Before writing any code, verify the current state of the application:

1. **Check** `pmg-business-mode.js` : Confirm it currently builds a single drawer with three sections (Brand Voice, Social Prompt Packs, Platform Builder).
2. **Check** `pmg-growth-actions.js` : Confirm it mounts the "Copy All" and "Export PDF" buttons when `window.__pmgLastSource === 'growth'` . **Do not touch this file.** It works perfectly and must continue to work with Growth Mode 2.0.
3. **Check** `app.html` : Confirm the `pmgv3-business` button exists in the topbar and triggers the drawer.
4. **Check** `pmg-chassis-v3.js` : Confirm the `pmgv3-business` button is injected correctly.

The core constraint remains: Growth Mode 2.0 must assemble a prompt string, inject it into `#goal` , and submit `#prompt-form` . No new backend routes. No changes to the core `generatePrompt` flow.

2. Architecture & UI Changes

The existing `pmg-bm-drawer` must be rebuilt to support a two-tab interface at the top: [**Business**] and [**Creator**].

2.1 The Tab System

- Add a tab switcher at the top of the drawer body (below the header).
- **Business Tab:** Active by default. Shows Business tools.
- **Creator Tab:** Shows Creator tools.

- **Shared Tool:** The "Pillar Content Builder" appears at the bottom of BOTH tabs.

2.2 The Tools (Accordions)

Each tool is an accordion section (`<details>`), exactly like the current implementation. When opened, it reveals the necessary input fields and a "Build Prompt →" button.

Business Lane Tools

Every tool must display a short description line directly below the accordion title (inside the `<details>` element, before the input fields). These are the exact descriptions to use:

1. Brand Voice (Shared/Persisted)

Description: "Set your target audience and brand tone once. Every prompt you build will automatically match your voice."

Inputs: Target Audience (text), Brand Tone (select). Saves to `localStorage` .

2. Customer Persona Builder

Description: "Describe your product and get a detailed profile of your ideal buyer — their pain points, desires, and where to find them."

Inputs: Product/Service description (textarea).

3. Offer Clarity Tool

Description: "Turn a rough idea into a sharp value proposition, tagline, and 3 key benefits — the foundation of all your marketing copy."

Inputs: Raw idea/offer description (textarea).

4. Sales Funnel Builder

Description: "Map out a complete 5-step funnel from first impression to closed sale — awareness, lead magnet, nurture, sales page, and close."

Inputs: Product (text), Price point (text), Target audience (text).

5. Email Sequence Builder

Description: "Build a ready-to-send email sequence for any stage of your business — welcome new subscribers, launch a product, or win back lost customers."

Inputs: Sequence Type (select: Welcome, Launch, Abandoned Cart, Re-engagement), Offer details (textarea).

6. Objection Crusher

Description: "Turn your most common sales objections into confident, non-pushy rebuttals you can use on calls, in DMs, or on your sales page."

Inputs: Product (text), Main objection heard from customers (textarea).

7. Pricing & Positioning Advisor

Description: "Not sure if you're charging enough? Describe your offer and price — get specific, actionable advice on what it would take to confidently charge more."

Inputs: Current price (text), Product description (textarea).

8. Multi-Platform Launch Drop

Description: "Generate a coordinated set of platform-native posts for a launch, product, or campaign — all in one shot."

Inputs: Pack type (select), Your offer/idea (textarea). (This is the existing "Social Prompt Packs" renamed.)

Creator Lane Tools

Every tool must display a short description line directly below the accordion title. These are the exact descriptions to use:

1. Creator Profile (Shared/Persisted)

Description: "Set your niche, platform, and vibe once. Every prompt you build will be tuned to your content style automatically."

Inputs: Niche (text), Platform Focus (select: TikTok, Instagram, YouTube, LinkedIn, X), Creator Vibe (select — use same Brand Tones list). Saves to `localStorage`.

2. Hook Generator

Description: "Stop the scroll. Get 5 completely different hook styles for any topic — curiosity, controversy, story, stat, and bold promise — so you can test what hits."

Inputs: Topic/Idea (textarea).

3. Content Calendar Builder

Description: "Never stare at a blank screen again. Get a 2-week content calendar with formats, topics, and goals — built for your niche and posting schedule."

Inputs: Niche (text), Posting Frequency (select: Daily, 3x/week, Weekly).

4. Series Builder

Description: "Turn one idea into a binge-worthy series. Get 5 episode titles, angles, and hooks that build on each other and keep your audience coming back."

Inputs: Core concept for the series (textarea).

5. Repurpose Engine

Description: "One piece of content, four platforms. Paste anything you've already made and get a ready-to-post X thread, TikTok script, LinkedIn post, and newsletter intro."

Inputs: Original content (textarea — paste text or describe the piece).

6. Viral Title & Thumbnail Concept Generator

Description: "Your title and thumbnail are 90% of your views. Get 5 click-worthy title variants and a matching thumbnail concept for each — built for YouTube and Shorts."

Inputs: Video topic (textarea).

7. Multi-Platform Drop

Description: "Generate a coordinated set of platform-native posts for a launch, product, or campaign — all in one shot."

Inputs: Pack type (select), Your offer/idea (textarea). (Existing Social Packs, moved here.)

8. Creator Bio & Profile Optimizer

Description: "Your bio is your first impression. Get optimized bios for TikTok, Instagram, X, and LinkedIn — each written for that platform's character limits and culture."

Inputs: Niche (text), Value proposition (text — what makes you different).

9. Collab Pitch Builder

Description: "Land brand deals and creator collabs with a professional pitch that focuses on what they get — not just what you want. Works for DMs and emails."

Inputs: Your stats/niche (textarea), Target brand or creator (text).

Shared Tool (Bottom of both tabs)

- **Pillar Content Builder**

Description: "Build the one piece of content that powers everything else. Get a complete outline for a long-form blog post, YouTube video, or podcast episode — with built-in ideas for 3 micro-content pieces you can spin off from it."

Inputs: Core topic (textarea), Format (select: Blog Post, YouTube Video, Podcast Episode).

3. Prompt Templates (The Logic)

When a user clicks "Build Prompt →" inside any tool, assemble the prompt string using these templates. Inject the user's inputs where bracketed.

Note: Always append the persisted Brand Voice/Creator Profile to the end of the prompt if it exists.

Business Lane Prompts

Customer Persona Builder:

Act as a senior market researcher. Build a detailed buyer persona for this product/service: [Product]. Include: Demographics, core pain points, primary desires, buying triggers, and where they hang out online.

Offer Clarity Tool:

Act as a direct-response copywriter. Take this raw offer idea: [Offer] and refine it into: 1) A one-sentence value proposition. 2) A punchy tagline. 3) Three bullet points highlighting the biggest benefits (not features).

Sales Funnel Builder:

Act as a conversion rate optimization expert. Map out a 5-step sales funnel for this product: [Product] priced at [Price] targeting [Audience]. Include: 1) Awareness hook/ad angle. 2) Lead magnet idea. 3) 3-part email nurture sequence outline. 4) Sales page core argument. 5) Urgency/Close CTA.

Email Sequence Builder:

Act as an expert email marketer. Write a complete [Sequence Type] email sequence for this offer: [Offer]. Include subject lines, preview text, and full body copy for each email. Ensure a logical progression from email 1 to the final pitch.

Objection Crusher:

Act as a master sales closer. My product is [Product] and the main objection I hear is [Objection]. Write a 3-part rebuttal script I can use on sales calls or in DMs to overcome this objection without sounding pushy. Use the "Feel, Felt, Found" framework.

Pricing & Positioning Advisor:

Act as a pricing strategist. My product is [Product] and currently costs [Price]. If I had to double my price today, what 3 specific things would I need to add, improve, or guarantee to make the new price feel like a bargain?

Creator Lane Prompts

Hook Generator:

Act as a viral content strategist. Write 5 distinct, scroll-stopping hooks for this topic: [Topic]. Use these 5 frameworks: 1) Curiosity gap. 2) Contrarian/Controversial. 3) Personal story/Failure. 4) Shocking statistic. 5) Bold promise. Keep them under 15 words each.

Content Calendar Builder:

Act as a social media manager. Build a 2-week content calendar for a creator in the [Niche] niche, posting [Frequency]. For each post, provide: The format (e.g., Reel,

Carousel, Thread), the core topic, and the specific goal (Awareness, Engagement, Conversion).

Series Builder:

Act as a YouTube/Podcast producer. Take this core concept: [Concept] and map it out into a 5-part episodic series. For each episode, provide a click-worthy title, the main angle/hook, and how it connects to the next episode to keep viewers binging.

Repurpose Engine:

Act as a content repurposing expert. Take this original content: [Content] and extract the core insights. Then, write: 1) A 5-tweet X thread. 2) A script for a 60-second TikTok/Reel. 3) A LinkedIn text post. 4) A short email newsletter intro linking to the original.

Viral Title & Thumbnail Concept Generator:

Act as a YouTube growth expert. For a video about [Topic], generate 5 highly clickable title variants (under 60 characters). For each title, describe a matching thumbnail concept that creates visual curiosity and complements the title without repeating it.

Creator Bio & Profile Optimizer:

Act as a personal branding expert. My niche is [Niche] and my value prop is [Value Prop]. Write optimized profile bios for: 1) X/Twitter (160 chars). 2) Instagram (150 chars, use line breaks). 3) TikTok (80 chars). 4) LinkedIn headline (220 chars).

Collab Pitch Builder:

Act as an influencer manager. Write a professional, concise outreach email/DM pitching a collaboration. My niche/stats: [Stats/Niche]. Target: [Target]. The pitch must focus on the value *they* get from collaborating with me, not just what I want.

Shared Prompt

Pillar Content Builder:

Act as a content strategist. Outline a comprehensive [Format] piece about [Topic]. Include: 1) A strong hook/intro. 2) 3-5 main sections with key talking points. 3) A clear conclusion/CTA. 4) A list of 3 "micro-content" pieces that can be extracted from this pillar piece later.

4. Implementation Details

1. **File to modify:** `artifacts/promptmegood/public/scripts/pmg-business-mode.js`

2. **CSS updates:** Update `pmg-business-mode.css` to style the new tab switcher. Use existing chassis-v3 tab styles if possible, or simple pill buttons.
 3. **State Management:** When switching tabs, hide the accordions for the inactive lane and show the accordions for the active lane. The Pillar Content Builder stays visible at the bottom of both.
 4. **Dispatch Logic:** The `dispatchToText(goalText)` function remains exactly the same. It must set `window.__pmgLastSource = 'growth'`, close the drawer, switch to the text panel, fill `#goal`, and submit the form.
-

5. Verification Checklist (Pass/Fail)

Replit, you must verify all of these before considering the task complete:

- ☐ The Growth Mode drawer opens via the  icon in the topbar.
- ☐ The drawer has two tabs: Business and Creator.
- ☐ Switching tabs toggles the correct set of tools.
- ☐ Brand Voice (Business) and Creator Profile (Creator) save to `localStorage` and reload correctly.
- ☐ Clicking "Build Prompt →" in *any* tool successfully closes the drawer, populates the `#goal` field in the Text Prompts tab, and triggers generation.
- ☐ The generated prompt includes the specific instructions from the templates above, plus the persisted Brand Voice/Creator Profile.
The "Copy All Sections" and "Export as PDF" buttons *still appear* above the result box after a Growth Mode generation completes. (This proves `window.__pmgLastSource` is being set correctly).
- ☐ No new backend routes were created.

If any of these fail, do not submit the code. Fix it first.
