

PromptMeGood Complete Fix & Rename Plan

This document outlines the final set of fixes, label renames, and layout adjustments needed to take PromptMeGood from a strong beta to a polished, intuitive 1.0 product.

1. Label Renames for Clarity

The current labels are functional but occasionally confusing or redundant. These renames will simplify the cognitive load for first-time users.

Current Label	New Label	Why
"Help Me Start (Answer 4 Quick Questions)"	"Guided Setup"	Shorter, cleaner, and fits better on mobile.
"Visual Asset Engine / Photography Suite"	"Image Prompt Builder"	Removes the confusing dual-naming and clarifies exactly what the panel does.
"Open Visual Studio"	"Launch Image Studio"	More action-oriented and aligns with the "Image Studio" button at the bottom.
"Master Link — OFF"	"Sync with Text Prompt"	Explains the actual function (linking the image prompt to the text prompt) rather than using abstract terminology.
"Customize Output (Optional)"	"Advanced Output Settings"	Sounds more professional and less like a settings menu.

2. Layout & Hierarchy Fixes

The "Help Me Start" Duplication

- **Issue:** The "Help Me Start" button appears in the top-right nav bar AND above the goal input.
- **Fix:** Remove the "Help Me Start?" link from the top-right nav bar entirely. Keep the primary button above the goal input (with the "MOST LOVED" badge).

The Signature Feature Launchers

- **Issue:** The three signature feature buttons ( Image Studio ,  Sora Video ,  Storyboard) are buried at the very bottom of the page, below the entire prompt tuning section.
- **Fix:** Move this row of three buttons to the top of the Workstation, directly below the "Your Goal" input box. This ensures users see the full capabilities of the platform immediately without scrolling.

The Homepage Hero Gap

- **Issue:** There is a large empty gap below the hero section on the homepage.
- **Fix:** In the CSS, locate `main.hero` and change `flex-grow: 1` to `flex-grow: 0` . This will prevent the hero section from stretching to fill the viewport height unnecessarily.

3. Functional Fixes

The Visual Studio Modal

- **Issue:** Clicking "Open Visual Studio" (or the new "Launch Image Studio") only toggles the right column content instead of launching a full-screen modal.
- **Fix:** Ensure the button with ID `pmg-vs-launch-rail` triggers the full Visual Studio modal overlay (`#pmg-visual-studio-modal`), not just an inline mount in the right column. The modal must take over the screen to provide a dedicated creative canvas.

The "Customize Output" Section

- **Issue:** The "Customize Output" section presents a wall of text and options that can overwhelm new users.
- **Fix:** Ensure this section is collapsed by default. Shorten the internal descriptions to a single line each to reduce visual clutter.

Summary for Replit

1. Apply the 5 label renames listed above.
2. Remove the redundant "Help Me Start?" link from the nav bar.
3. Move the Image Studio, Sora Video, and Storyboard buttons to the top of the Workstation, below the Goal input.
4. Fix the homepage hero gap by setting `flex-grow: 0` on `main.hero` .

5. Ensure the Visual Studio button launches the full-screen modal, not an inline panel swap.
6. Keep the Advanced Output Settings collapsed by default with shortened descriptions.
