

Replit Implementation Brief: Business Mode Upgrade

Replit, we are introducing a massive new tier to PromptMeGood called **Business Mode**. This is a premium, outcome-specific workspace designed for power users (entrepreneurs, marketers, developers, creators).

This does **not** replace the existing prompt builder. It sits alongside it as a premium tab/mode. When a user clicks "Business Mode" (or upgrades to access it), they enter a guided, high-value workflow environment.

1. The Core Architecture: The Business Mode Dashboard

UI Layout:

- Add a new primary tab at the top: [📝 Text Prompts] [📷 Photography] [🎬 Video] [👤 Business Mode 🔒]
- When clicked, the left column transforms into the **Business Mode Dashboard**.
- The dashboard features a clean, grid-based menu of the **Six Workflow Packs** (detailed below).
- Above the grid, there is a persistent **"Brand Voice Vault"** configuration section.

2. The Brand Voice Vault (Global Settings)

This is the killer feature. Users define their brand once, and every prompt generated in Business Mode automatically inherits these rules.

HTML Structure (Left Column Header):

HTML

```
<div class="pmg-business-brand-vault">
  <h3>🏛️ Your Brand Voice Vault</h3>
  <p>Set this once. Every prompt will automatically use these rules.</p>

  <label>Target Audience (Who are you talking to?)</label>
  <input type="text" id="biz-audience" placeholder="e.g., Busy moms, B2B SaaS f

  <label>Brand Tone (How do you sound?)</label>
  <input type="text" id="biz-tone" placeholder="e.g., Professional but witty, e

  <label>Negative Constraints (What should the AI NEVER do?)</label>
```

```
<textarea id="biz-negative" placeholder="e.g., Never use emojis, avoid corpora"></textarea>

<button id="biz-save-brand" class="btn-secondary">Save Brand Voice</button>
</div>
```

Logic: When a user generates a prompt from *any* Business Mode template, the system must automatically append a hidden system instruction to the prompt:

```
[SYSTEM INSTRUCTION: The target audience is ${biz-audience}. The tone must be ${biz-tone}. STRICT
NEGATIVE CONSTRAINTS: ${biz-negative}.]
```

3. The Six Workflow Packs (The Grid)

Below the Brand Vault, display a CSS Grid of the six packs. When a user clicks a pack, it opens a list of specific templates.

Pack 1: 🏢 Entrepreneur & Business

- **Offer Creation:** Help me craft an irresistible offer for [PRODUCT/SERVICE]. Target audience is [AUDIENCE]. Price point is [PRICE]. Include a strong guarantee and 3 bonuses.
- **Landing Page Copy:** Write high-converting landing page copy for [PRODUCT]. Include a hook headline, 3 PAS (Problem-Agitation-Solution) bullet points, and a strong CTA.
- **Cold Email Sequence:** Write a 3-part cold email sequence targeting [DECISION MAKER] at [INDUSTRY] companies. Goal is to book a 15-minute demo for [PRODUCT].

Pack 2: 🛍️ E-Commerce & Shopify

- **Product Description:** Write an SEO-optimized Shopify product description for [PRODUCT NAME]. Key features: [FEATURES]. Focus on the emotional benefit, not just specs.
- **Facebook Ad Angle:** Generate 3 distinct Facebook ad angles for [PRODUCT]. Angle 1: Logical/ROI. Angle 2: Emotional/Status. Angle 3: Urgency/Scarcity.
- **Abandoned Cart Email:** Write a 2-part abandoned cart email sequence for [PRODUCT]. Email 1: Helpful reminder. Email 2: 10% discount offer with 24-hour urgency.

Pack 3: 💻 Builder (Replit / Bolt / Cursor)

- **App Spec Prompt:** Write a detailed PRD (Product Requirements Document) for an AI agent to build a [APP TYPE] using [TECH STACK]. Core features: [FEATURES].
- **Debugging Prompt:** I am getting this error: [ERROR MESSAGE] in my [LANGUAGE/Framework] code. The expected behavior is [EXPECTED]. Write a prompt to diagnose and fix this.

- **Database Schema:** Design a relational database schema for a [APP TYPE]. It needs to track [ENTITIES]. Provide the SQL table creation scripts.

Pack 4: 🎬 Creator (YouTube, TikTok, Social)

- **YouTube Script:** Write a YouTube script about [TOPIC]. Start with a 15-second hook. Outline 3 main chapters. End with a call to subscribe.
- **TikTok Hook Generator:** Give me 5 viral TikTok hooks for a video about [TOPIC]. Use the 'Negative Hook' and 'Curiosity Gap' frameworks.
- **Content Calendar:** Create a 30-day content calendar for a [NICHE] creator. Include 2 YouTube long-form ideas, 4 Shorts ideas, and 8 Twitter threads.

Pack 5: 📣 Marketing & Advertising

- **Google Search Ad:** Write 3 Headlines (max 30 chars) and 2 Descriptions (max 90 chars) for a Google Search Ad targeting the keyword [KEYWORD].
- **Webinar Outline:** Outline a 45-minute webinar teaching [TOPIC]. Include a 5-minute intro, 30 minutes of teaching, and a 10-minute pitch for [PRODUCT].
- **Press Release:** Write a professional press release announcing [EVENT/LAUNCH]. Include a quote from [SPOKESPERSON NAME] and a company boilerplate.

Pack 6: 🎧 Customer Experience

- **Support Reply:** Draft an empathetic reply to a customer who is angry about [ISSUE]. Offer them [RESOLUTION].
- **Onboarding Sequence:** Write a 3-part welcome email sequence for new users of [SOFTWARE/SERVICE]. Goal: Get them to complete [FIRST ACTION].
- **Refund Policy:** Write a clear, friendly, and firm refund policy for a [BUSINESS TYPE]. Terms: [TERMS].

4. The Template Execution UI (Prompt Variables)

When a user clicks a specific template (e.g., "Product Description"), the UI changes to the **Execution View**.

Implementation:

Instead of a blank text box, the user sees a form with specific input fields based on the variables in the template (the [BRACKETED] items above).

HTML

```

<div class="pmg-business-execution">
  <h4>🛍️ Shopify Product Description</h4>

  <label>Product Name</label>
  <input type="text" id="var-product-name">

  <label>Key Features (comma separated)</label>
  <input type="text" id="var-features">

  <button id="biz-generate-prompt" class="btn-primary">Generate Master Prompt</button>
</div>

```

Logic:

When the user clicks "Generate Master Prompt":

1. The system takes the base template.
2. It replaces the [VARIABLES] with the user's input.
3. It appends the **Brand Voice Vault** rules.
4. It outputs the final, highly-engineered prompt into the Right Column, exactly like the standard app does today.

5. The "Before & After" Quality View (Right Column)

To prove the value of Business Mode, the right column output should include a "Quality Check" toggle.

Implementation:

Add a toggle above the generated prompt: [View Final Prompt] | [View AI Analysis] .

When "View AI Analysis" is clicked, show a brief explanation of *why* this prompt is powerful (e.g., *"This prompt uses the PAS framework, injects your brand voice, and sets strict negative constraints to prevent hallucination."*)

Summary of Work for Replit:

1. Build the new Business Mode tab and layout.
2. Build the Brand Voice Vault and its localStorage saving mechanism.
3. Build the CSS Grid for the 6 Workflow Packs.
4. Build the dynamic Execution View that parses templates and creates input fields for variables.

5. Wire the "Generate Master Prompt" button to combine the template, variables, and Brand Voice into the final output in the right column.
