

Mobile & Topbar UX Fixes

This brief addresses the remaining friction points on the mobile experience, specifically focusing on the topbar, the logo overflow, and the Vault/Expert Mode drawers.

1. Topbar Logo Overflow (Mobile)

Problem: On mobile screens (especially below 400px), the "PromptMeGood" brand text and the "Beta" badge get cut off or squished because the topbar icons (Help, Business, Vault, Settings, Upgrade) take up too much horizontal space.

Fixes:

- **Hide the "Beta" badge on mobile:** Add a media query to `display: none` the `.pmgv3-brand-beta` element on screens `< 480px`. It's a nice-to-have, but it's eating valuable horizontal space.
- **Compact the Icon Row:** Reduce the `gap` in `.pmgv3-tb-r` from `8px` to `4px` on mobile.
- **Allow Brand Text Truncation:** Ensure `.pmgv3-brand > span:first-of-type` has `text-overflow: ellipsis` and `overflow: hidden` so if it must cut off, it does so gracefully with an ellipsis rather than just clipping the letters abruptly.

2. The Vault & Settings Drawers (Mobile)

Problem: When the Vault or Settings drawers open on mobile, they slide in from the right. However, the close button (`×`) is sometimes hard to tap if the user's thumb is at the bottom of the screen, and there's no clear "tap outside to close" affordance if the overlay isn't obvious.

Fixes:

- **Ensure Overlay is Clickable:** Verify that the `#pmgv3-vault-overlay` has a click listener that triggers `closeVaultDrawer()`. (This appears to be in the code, but ensure it works reliably on touch devices).
- **Add a Bottom "Done" Button:** In addition to the top-right `×`, add a full-width "Done" or "Close" button at the very bottom of the drawer body on mobile viewports. This gives users a massive, easy-to-reach tap target to dismiss the drawer.

3. The "Send To" Grid (Post-Generation)

Problem: On very small screens (`< 360px`), the "Send your prompt to:" grid (ChatGPT, Claude, Perplexity, Gemini) collapses to a single column. This makes the post-generation screen incredibly long.

Fixes:

- **Keep it 2x2 on Mobile:** Change the media query for `< 360px` so that `.pmgv3-send-grid` remains `grid-template-columns: 1fr 1fr;`. The buttons are small enough that two can fit side-by-side even on an iPhone SE. This halves the vertical space taken up by the handoff grid.

Execute these CSS and structural changes to tighten up the mobile experience.
