

UX & CRO Audit Report: PromptMeGood

Date: May 9, 2026

Scope: Full cross-reference of the live site (`promptmegood.com`) against the GitHub repository (`DeShaunJ78/Prompt-Me-Good`).

Executive Summary

This audit evaluates the PromptMeGood experience from the perspective of a first-time user landing on the app. The analysis is grounded in both the live DOM structure and the underlying source code.

The core product is highly functional, but there are critical friction points in the layout hierarchy and significant discrepancies between the live site and the repository code. The most urgent issue is the placement of the primary conversion action (the Generate button), which falls below the fold on standard laptop screens.

1. The "Generate Button" Visibility Issue

The Problem:

On standard laptop screens (e.g., 13-inch MacBooks with a viewport height around 768px), the primary "🌟 Generate My Prompt" button is pushed below the fold inside the scrollable left column.

The Evidence:

- DOM analysis confirms the left column (`.pmgv3-left`) is a scrollable container (`overflow: auto`).
- The generate section (`#generate-section`) sits approximately 900px down inside this container.
- Because the left column's height is constrained by the viewport, users must actively scroll down inside the left panel to find the button.
- First-time users typing a goal into the top textarea may not realize they need to scroll to execute it, creating a "dead end" feeling.

The Fix:

- **Option A (Sticky Footer):** Pin the generate button to the bottom of the `.pmgv3-left` container so it is always visible regardless of scroll position.

- **Option B (Reorder):** Move the generate button higher up in the DOM hierarchy, immediately below the "Your Idea" textarea, before the tuning accordion.
-

2. Code vs. Live Site Discrepancies

There is a severe mismatch between the code in the GitHub repository and what is currently deployed on the live site.

The Pricing Page

- **Live Site:** Features a comprehensive 4-tier structure (Free, Founding Member at \$79, Pro Monthly at \$9, Pro Yearly at \$79) with a "Founding Member Waitlist Open" banner.
- **Repository (`pricing.html`):** Only shows Free and Pro (\$9/mo "Coming Soon"). The Founding Member tier does not exist in the repo code.
- **Impact:** Any changes made to the repo's pricing page will overwrite the live Founding Member structure if deployed.

The Guide Page

- **Live Site:** The Quick Start Guide references stale button names. Step 2 tells users to tap "Analyze My Idea" — a button that no longer exists in the v3 app chassis.
- **Impact:** High cognitive friction for new users trying to follow the manual.

The Fix:

- Pull the latest live code into the repository before making any further structural changes.
 - Update `guide.html` to reflect the current UI (e.g., remove "Analyze My Idea" and ensure it points to "🌟 Generate My Prompt").
-

3. UI & Layout Friction

Topbar Icon Labels

- **The Problem:** The topbar uses emoji icons (`?` , `👛` , `📄` , `⚙️`) with no visible text labels. While they have `hint` attributes in the DOM, these tooltips are not discoverable on mobile or touch devices.
- **The Fix:** Add proper `aria-label` and `title` attributes for accessibility, and consider a subtle text label for desktop users, or a tap-to-reveal tooltip for mobile.

Start Fast Pills Wrapping

- **The Problem:** In the right column's "Start Fast" section, the third pill ("Brainstorm 10 viral TikTok ideas") wraps to a second line, breaking the intended horizontal row layout.
 - **The Fix:** Ensure the container has `flex-wrap: wrap` and adjust the padding/font-size slightly so they fit cleanly, or reduce the text length of the pills.
-

Prioritized Action Plan

1. **URGENT: Fix Generate Button Visibility.** Pin the generate button to the bottom of the left column or move it up so it is always visible above the fold on 768px screens.
2. **URGENT: Sync Repo with Live Code.** Do not deploy the repo's `pricing.html` until it is updated to match the live Founding Member structure.
3. **HIGH: Update Guide Copy.** Rewrite step 2 in `guide.html` to remove the reference to the non-existent "Analyze My Idea" button.
4. **MED: Fix Start Fast Pill Wrapping.** Adjust CSS to keep the pills in a clean horizontal row.
5. **LOW: Enhance Topbar Icons.** Ensure tooltips are accessible on all devices.
