

PromptMeGood — Pill UI Fix for Replit

Instruction for Replit AI — Copy and paste this entire block.

Change 1: Remove the "Help Me Start" Pills Entirely

The "Help Me Start" guided question pills (the 4-question onboarding flow) are no longer needed and must be removed completely from the UI.

What to remove:

- The "Help Me Start (Answer 4 Quick Questions)" button.
- The entire guided question pill flow that appears when that button is clicked (all 4 question steps and their associated pill options).
- Any JavaScript logic that drives that guided flow.
- Any CSS classes or styles that are exclusively used by that component.

Do NOT remove:

- The main composer textarea (`#goal` or `#guided-q-goal`).
 - The "Fix My Prompt" button.
 - Any other part of the workstation.
-

Change 2: Restore the Original Single-Layer Pill Format for Next Entry

The pill selectors (used for things like Tone, Format, Category, Style, etc.) must be restored to their **original single-row, horizontal pill format** — one clean layer of pills per option group, not stacked or multi-row.

What this means:

- Each option group (e.g., Tone, Format, Length) should display its pills in a **single horizontal row**.
- Pills should be compact, inline, and wrap only if the screen is too narrow — they should never be forced into a multi-row grid layout.
- The selected pill should be highlighted with the brand accent color (terracotta `#E2725B` or teal, whichever is the current active theme accent).
- Unselected pills should be subtle — dark background with a light border.

The correct CSS for the pill row:

CSS

```
.pill-group {
  display: flex;
  flex-direction: row;
  flex-wrap: wrap;
  gap: 8px;
  align-items: center;
}

.pill {
  display: inline-flex;
  align-items: center;
  padding: 6px 14px;
  border-radius: 999px;
  border: 1px solid var(--pmg-border);
  background: var(--pmg-input-bg);
  color: var(--pmg-text-muted);
  font-size: 13px;
  cursor: pointer;
  white-space: nowrap;
  transition: all 0.15s ease;
}

.pill:hover {
  border-color: var(--pmg-accent);
  color: var(--pmg-accent);
}

.pill.selected,
.pill.active {
  background: var(--pmg-accent);
  border-color: var(--pmg-accent);
  color: #fff;
  font-weight: 600;
}
```

Acceptance Criteria

1. The "Help Me Start" button and its entire guided flow are **completely gone** from the DOM — no hidden elements, no `display: none`, fully removed.
2. All pill option groups display in a **single horizontal row** (wrapping naturally if needed, not forced into a grid).

3. Selected pills are clearly highlighted with the brand accent color.
 4. No other part of the workstation is affected by these changes.
-

Developer Note for Replit:

"Make only these two targeted changes. Do not touch any generation logic, API calls, localStorage, or any other UI components outside of the Help Me Start flow and the pill styling."
