

PromptMeGood Whisperer Text Fix

CORE OBJECTIVE

The Prompt Whisperer typewriter animation is working perfectly, but some of the question strings are too long and get truncated on mobile screens.

This brief provides the exact replacement strings to ensure all questions fit cleanly within the input box on all devices, without requiring any layout or CSS changes.

BUG: TEXT TRUNCATION ON MOBILE

The Problem:

In `pmg-spark-panel.js`, the `questions` array contains strings that exceed 45 characters. On mobile devices, these long strings get cut off, preventing the user from reading the full context of the prompt suggestion.

The Fix:

Replace the existing `questions` array in `pmg-spark-panel.js` with the shortened versions provided below. The logic, timing, and layout remain completely untouched.

IMPLEMENTATION STEPS

1. Open `pmg-spark-panel.js`.
2. Locate the `window.PMGSpark.questions` array (usually near the top of the file).
3. Replace the entire array with this updated, mobile-optimized list:

JavaScript

```
window.PMGSpark.questions = [  
  "What problem keeps coming back?",  
  "What do you need AI to do today?",  
  "What's your dream outcome?",  
  "What would make today easier?",  
  "What do you want to create?",  
  "Who are you trying to reach?",  
  "What's the one thing you need done?",  
  "What would you build if you knew it'd work?",  
  "What's your biggest challenge right now?",  
  "What content do you want to create?"  
];
```

Strict Constraint: Do not alter any CSS, HTML, or other JavaScript logic. This is a pure string replacement task.
