

Replit Fix Brief: Desktop Visual Bugs

Replit, we have two specific visual bugs on the desktop layout that need immediate fixing. I have diagnosed the exact CSS root causes for both. Please implement the following fixes exactly as described.

1. The Collapsed "Tune Your Prompt" Bar is Too Small (Text Clipping)

The Issue: On desktop, when the "Tune Your Prompt" accordion is collapsed, the text is clipped and the bar is too small.

The root cause is that `.tuning-section` has `padding: 16px` and `box-sizing: border-box`. When collapsed, the content inside (`button.tuning-header`) is `24px` tall. However, the container is not expanding to fit the content + padding. The issue is caused by the `max-height` transition/animation or a missing `min-height` for the collapsed state.

The Fix:

In `pmg-chassis-v3.css`, update the `.tuning-section` rules to ensure it has enough height when collapsed:

CSS

```
/* Add this rule to ensure the collapsed state has enough height for the header */
.tuning-section:not(.is-mobile-open) {
  height: auto;
  min-height: 56px; /* 16px top padding + 24px header + 16px bottom padding */
}
```

Also, ensure that `button.tuning-header` has `margin-bottom: 0` when the section is collapsed, so it doesn't add unnecessary height:

CSS

```
html.pmg-chassis-v3 .tuning-section:not(.is-mobile-open) button.tuning-header {
  margin-bottom: 0;
}
```

2. The Green Horizontal Stripe in the AI Response Panel

The Issue: In the second screenshot, there is a horizontal green stripe cutting across the middle of the AI response text. This is caused by a background or border rule on a child

element inside the response box, likely a divider or a nested container that is inheriting a background color it shouldn't have.

The Fix:

In `pmg-chassis-v3.css` (or the relevant stylesheet for the AI response box), locate the divider or nested container inside the response box and remove the background color or border that is causing the stripe.

CSS

```
/* Find the element causing the stripe (e.g., a divider or nested container) and  
.ai-response-box hr,  
.ai-response-box .divider {  
  background: transparent !important;  
  border-top: 1px solid rgba(255, 255, 255, 0.1); /* Use a subtle border instead  
}
```

(Note: If the stripe is caused by a specific class like `.pmg-response-divider`, target that class directly and ensure its background is transparent or its height is 1px with a subtle color).
