

Visual Tab Redesign Brief for Replit

The mobile inline view of the Visual Studio (the Visual tab) is functionally working, but aesthetically it is failing. The visual hierarchy is flat, elements are colliding, and it feels like a settings page rather than a creative studio.

Implement the following layout and CSS changes specifically for the mobile inline view (`.pmg-vs-inline` or when the Visual tab is active on mobile).

1. Fix the Header & Button Collision

The Problem: The "Launch Image Studio" button is floating awkwardly and overlapping the "Image Prompt Builder" header text.

The Fix: Remove the "Launch Image Studio" button entirely from the mobile inline view. It is redundant because the user is *already* in the Image Studio.

CSS

```
/* Hide the launch button when the Visual tab is active on mobile */
@media (max-width: 768px) {
  .pmg-vs-inline #pmg-vs-launch-rail,
  [data-pmgv2-mobile-tab="visual"].is-active #pmg-vs-launch-rail {
    display: none !important;
  }
}
```

2. Reorder the Visual Hierarchy

The Problem: The "Sync with Text Prompt" toggle and "Master Actionable Plan" cards are taking up the most valuable real estate at the top of the screen, pushing the actual image creation tools down.

The Fix: Move the Sync toggle and Master Plan sections to the *bottom* of the Image Studio, below the Photography Suite. The top of the screen must be dedicated entirely to the Image/Video toggle and the "Describe Your Image" input.

New DOM Order for the Visual Tab:

1. Header ("Image Prompt Builder")
2. Mode Toggle (Image / Video)
3. Goal Input ("Describe Your Image")
4. Reverse Engineer Button

5. Photography Suite Accordion
6. Generate Button
7. *[Moved]* Sync with Text Prompt Toggle
8. *[Moved]* Master Actionable Plan

3. Elevate the Photography Suite

The Problem: The "Photography Suite — style, lighting, camera" label is tiny and gets lost in the visual noise.

The Fix: Make it a prominent section header.

CSS

```
/* Make the Photography Suite header stand out */
.pmg-vs-inline .pmg-photo-suite-header {
  font-size: 1.1rem;
  font-weight: 600;
  color: var(--g2-mint, #3ee0a0);
  margin-top: 24px;
  margin-bottom: 12px;
  border-bottom: 1px solid rgba(62, 224, 160, 0.2);
  padding-bottom: 8px;
}
```

4. Clean Up the Spacing

The Problem: The elements are cramped and lack breathing room.

The Fix: Add consistent vertical rhythm.

CSS

```
/* Add breathing room between major sections */
.pmg-vs-inline > * + * {
  margin-top: 16px;
}

/* Give the main input more presence */
.pmg-vs-inline textarea#goal {
  min-height: 120px;
  font-size: 1.05rem;
  line-height: 1.5;
}
```

```
padding: 16px;  
}
```

Summary for the Developer

1. **Hide the "Launch Image Studio" button** on mobile when the Visual tab is active.
2. **Move the "Sync with Text Prompt" and "Master Actionable Plan" sections** to the bottom of the column, below the Photography Suite.
3. **Ensure the Image/Video toggle and the "Describe Your Image" input** are the very first things the user sees under the header.
4. **Increase the font size and padding** of the Photography Suite header and the main textarea to make them feel like primary creative tools.
