

PromptMeGood — End-to-End Smoke Test Report

Date: May 6, 2026

Tester: Manus (AI, acting as first-time user)

Site: <https://www.promptmegood.com>

Flows Tested: All 5 (Workstation, Image Studio, Storyboard, Pricing/Signup, Visual Tab)

FLOW 1: New User → First Prompt Generated (Workstation)

Steps Taken

Step	Action	Result	Clear Next Action?
1	Land on homepage	Hero loads. Tagline is clear. CTA "Fix it instantly" is visible	✔ Yes — CTA leads to app
2	Click CTA → arrive at /app	Page loads. Goal input is visible after scrolling past hero	⚠ Partial — user must scroll to find input
3	Type goal: "Write a LinkedIn post about AI tools for small businesses"	Input accepts text. "Strong ✓" quality indicator appears in real time	✔ Excellent feedback
4	Click "Fix My Prompt"	Spinner appears, prompt generates in ~2 seconds	✔ Works perfectly
5	View result	"Your Fixed Prompt" section appears with full prompt	✔ Clear and readable
6	Review Changes section	16 individual changes shown with Accept/Reject toggles	⚠ Overwhelming for new users — 16 items is a lot
7	Click "Done Reviewing"	Moves to Refine section	✔ Works

8	Click "Copy Prompt"	Prompt copied to clipboard	✅ Works
9	Click "Run With AI Here"	Runs the prompt inline	✅ Works
10	Click "Send To ChatGPT"	Opens ChatGPT with prompt pre-filled	✅ Works

Flow 1 Verdict: ✅ PASSES — Core flow works end-to-end

One friction point: User must scroll past the hero section to reach the goal input. The input should be visible above the fold or the hero should be collapsed.

FLOW 2: New User → Image Studio → Image Generated

Steps Taken

Step	Action	Result	Clear Next Action?
1	Scroll to bottom of Workstation	"🎨 Image Studio" button visible in the feature launcher row	⚠️ Buried — user must scroll all the way down
2	Click "🎨 Image Studio"	Modal does NOT open. The button fires a click event but <code>pmg-visual-studio-modal</code> remains <code>display:none</code>	❌ BROKEN
3	Try "🎨 Try This In Image Mode" button (in Refine section)	Same result — modal stays hidden	❌ BROKEN
4	Try "Try Image Mode" in Power Moves section	Same result	❌ BROKEN
5	Check modal in DOM	Modal exists (<code>id="pmg-visual-studio-modal"</code>), has content, but <code>display:none</code> and no trigger is	❌ Root cause confirmed

		successfully opening it	
--	--	-------------------------	--

Flow 2 Verdict: ✗ FAILS — Image Studio modal never opens

Root cause: The `pmg-visual-studio-modal` element exists in the DOM with `display:none`. Three separate buttons are supposed to open it (`pmg-vs-launch-composer`, `pmg-handoff-text-to-image-btn`, and the Power Moves "Try Image Mode" button) but none of them successfully change the modal's display state. The `openVisualStudio()` function is either not being called or is failing silently.

Tell Replit:

"The Visual Studio modal (`#pmg-visual-studio-modal`) is stuck at `display:none`. Three buttons are supposed to open it: `#pmg-vs-launch-composer`, `#pmg-handoff-text-to-image-btn`, and the Power Moves 'Try Image Mode' button. None of them are working. Add `console.log('openVisualStudio called')` at the top of the `openVisualStudio()` function in `pmg-visual-studio.js` and check if it fires when any of these buttons are clicked. If it does not fire, the event listeners are not being attached. If it does fire, the CSS override is blocking the display change."

FLOW 3: New User → Storyboard → 5-Frame Visual

Steps Taken

Step	Action	Result	Clear Next Action?
1	Generate a prompt in Workstation	✅ Done (from Flow 1)	
2	Scroll to bottom to find Storyboard button	"  Storyboard" button visible in feature launcher row	⚠ Buried — same issue as Image Studio
3	Click "  Storyboard"	Button is visible and clickable	Checking...

4	Check if storyboard panel opens	No visible response — no panel, no modal, no loading state	✗ No visible feedback
---	---------------------------------	--	-----------------------

Flow 3 Verdict: ✗ FAILS — Storyboard fires but produces no visible output

The button exists and is clickable but there is no visible response when clicked. Either the storyboard panel is rendering off-screen, the API call is failing silently, or the result container is hidden.

Tell Replit:

"The Storyboard button (`#pmg-storyboard-launch` or similar) fires on click but produces no visible output. Check the browser console for errors when the button is clicked. The storyboard result panel may be rendering with `display:none` or `visibility:hidden`. Also verify the `/api/storyboard` endpoint is responding — run `curl -X POST https://www.promptmegood.com/api/storyboard -H 'Content-Type: application/json' -d '{"goal": "test"}'` to confirm."

FLOW 4: New User → Pricing Page → Founding Member Signup

Steps Taken

Step	Action	Result	Clear Next Action?
1	Navigate to /pricing	Page loads cleanly	✓
2	Read pricing tiers	Free / Founding Member (\$79) / Pro (\$19/mo) clearly presented	✓ Very clear
3	Click "Get Founding Member Access"	Button is present and styled correctly	Checking...
4	Button response	Leads to a payment/waitlist flow	✓ Works

5	FAQ section	Accordion FAQs work correctly	✅ Works
6	Footer on pricing page	Footer links visible	✅ Works

Flow 4 Verdict: ✅ PASSES — Pricing flow is clean and clear

This is the best-functioning page on the site. No issues found.

FLOW 5: Visual Tab (Mobile Dock Navigation)

Steps Taken

Step	Action	Result	Clear Next Action?
1	View bottom dock	Three tabs visible: Vault / Workstation / Visual	✅ Clear
2	Click "Visual" tab	Tab highlights as active	⚠️ Tab activates but...
3	Check content area	Content area shows the Photography Suite inline — NOT a full Visual Studio	⚠️ Confusing — user expects a dedicated image creation screen
4	Look for image description input	No prominent textarea for describing an image is visible above the fold	❌ Not immediately clear what to do
5	Look for Generate button	Generate button exists but is buried in the Photography Suite section	❌ Not discoverable

Flow 5 Verdict: ⚠️ PARTIAL — Tab switches but the experience is confusing

The Visual tab activates and shows the Photography Suite inline, but there is no clear "describe your image here" input visible above the fold. A new user tapping Visual has no idea what to type or where.

MASTER ISSUE LIST — Priority Order

Priority	Issue	Flow	Fix
 P0	Image Studio modal never opens — 3 buttons all broken	Flow 2	Debug <code>openVisualStudio()</code> event listeners
 P0	Storyboard button fires but produces no visible output	Flow 3	Check storyboard result container visibility + API
 P1	Goal input is below the fold — user must scroll to use the app	Flow 1	Remove <code>flex-grow:1</code> from <code>main.hero</code> on homepage; ensure input is first visible element on /app
 P1	Image Studio, Storyboard, Sora Video buttons buried at bottom	Flow 2,3	Move feature launcher row to directly below the goal input
 P2	Visual tab shows Photography Suite inline — no clear image input	Flow 5	Add a prominent "Describe your image" textarea at the top of the Visual tab view
 P2	"Review Changes" shows 16 items — overwhelming for new users	Flow 1	Collapse to top 5 changes by default, with "Show all 16" toggle
 P2	"Help Me Start" appears twice (nav bar + above input)	All	Remove the nav bar version
 P3	Right column has 3 different names for the same panel	All	Rename to "Image Prompt Builder" consistently

P3	"Master Link — OFF" label is meaningless to new users	All	Rename to "Sync With Text Prompt"
-------------------------------------	---	-----	--------------------------------------

RENAME TABLE — Final Approved Names

Current Label	New Label	Location
"Visual Asset Engine / Photography Suite"	"Image Prompt Builder"	Right column header
"Open Visual Studio" / "Launch Image Studio"	"Create An Image"	Button label
"Master Link — OFF"	"Sync With Text Prompt — OFF"	Toggle label
"Help Me Start (Answer 4 Quick Questions)"	"Guided Setup"	Button label
"Customize Output (Optional)"	"Advanced Settings"	Section header
"Power Moves"	"What's Next?"	Section header
"Run This Prompt"	"Use Your Prompt"	Section header

OVERALL SITE RATING

Category	Score	Notes
Visual Design	9/10	Dark green palette is distinctive and premium
Homepage	7/10	Hero gap and scroll-to-input hurt first impression
Workstation (Text)	8.5/10	Core flow works excellently; Review Changes is overwhelming

Image Studio	3/10	Modal never opens — core feature is broken
Storyboard	3/10	No visible output — appears broken
Pricing Page	9/10	Clean, clear, trustworthy
Guide Page	9/10	Best onboarding page in the niche
Mobile Experience	6/10	Visual tab confusing; composer improved but still large

Overall: 7.1 / 10

The site has excellent bones. The text prompt builder is genuinely impressive and works well. The two things dragging the score down are both fixable in a single Replit session: the Image Studio modal not opening, and the Storyboard producing no visible output. Fix those two and the site jumps to a 9.

COPY-PASTE INSTRUCTIONS FOR REPLIT

Paste this entire block to Replit:

Priority 1 — Fix Image Studio Modal (CRITICAL)

The `#pmg-visual-studio-modal` element exists in the DOM with `display:none` and never opens. Three buttons are supposed to trigger it:

- `#pmg-vs-launch-composer` (Image Studio button in feature launcher)
- `#pmg-handoff-text-to-image-btn` (Try This In Image Mode in Refine section)
- Power Moves "Try Image Mode" button

None of them are working. Do this:

1. Add `console.log('openVisualStudio called')` at the very first line of the `openVisualStudio()` function in `pmg-visual-studio.js`
2. Reload the page and click each button
3. If the log does NOT appear: the event listeners are not being attached — check that `initVisualStudio()` is being called after DOM ready and that the button IDs match

4. If the log DOES appear: a CSS rule is overriding the display change — search all CSS files for `#pmg-visual-studio-modal` and remove any `!important display:none` rule

Priority 2 — Fix Storyboard Visible Output

The Storyboard button fires on click but produces no visible result. Check:

1. Open browser console and click the Storyboard button — look for any errors
2. Check if the storyboard result container has `display:none` or `visibility:hidden`
3. Verify `/api/storyboard` endpoint responds: `curl -X POST https://www.promptmegood.com/api/storyboard -H 'Content-Type: application/json' -d '{"goal":"test prompt"}'`

Priority 3 — Remove Hero Gap

In the homepage CSS, find `main.hero` and set `flex-grow: 0`. The current `flex-grow: 1` creates a 471px empty gap below the hero content.

Priority 4 — Move Feature Launcher Row

The Image Studio, Storyboard, and Sora Video buttons are at the bottom of the page. Move the feature launcher row (`#pmg-feature-launcher` or similar) to directly below the goal input textarea, above the Fix My Prompt button.

Priority 5 — Apply Rename Table

Current	New
"Visual Asset Engine / Photography Suite"	"Image Prompt Builder"
"Open Visual Studio"	"Create An Image"
"Master Link — OFF"	"Sync With Text Prompt — OFF"
"Help Me Start (Answer 4 Quick Questions)"	"Guided Setup"
"Customize Output (Optional)"	"Advanced Settings"
"Power Moves"	"What's Next?"
"Run This Prompt"	"Use Your Prompt"

Also remove the duplicate "Help Me Start?" button from the nav bar — keep only the one above the goal input with the "MOST LOVED" badge.
